PART A

Non-Wood Forest Product Revision Plan

1: Introduction

Sakteng Wildlife Sanctuary, which is located in the easternmost part of the country, with an area of 740.60 km² encompassing Merak and Sakteng geog under Trashigang Dzongkhag has rich ecosystem diversity and distinctive culture, thus making sanctuary a unique. The diverse ecosystem ranges from warm broadleaved forest to alpine meadows sharing the borders with the Indian State of Arunachal Pradesh in the East and North. This sanctuary exhibit above 41 species of Rhododendron species and it is also home to some of the rarest and globally threatened wild flora and fauna.

The Merak geog located at an altitudinal range of around 3500 masl, under Trashigang Dzongkhag is connected with road network. Those communities residing there rare cattle, and few people have started shifting towards entrepreneurship. Today Merak geog have 510 households with population of 3250, and within that 20(Twenty) shops are run by individual to cater the services. This geog even have 2(two) Lhakhangs, one at Merak and other at Guengu.

The two lhakhangs are engaged in performing ritual for almost the 2 to 3 months. However, during ritual the community have to buy the incense and other sangzoe from Trashigang and Rangjung. The opportunity of establishing the incense groups which can supply the religious items easily at door step due to rich resources readily available for manufacturing the incense and sangzoe.

The Chew Chew Khachap Chetrin Tshokpa comprising of 7(seven) members started the Non-Wood Forest Product (NWFP) group in year 2019. This group mainly are the gomchen (lay monk) who are living on daily wages and also those members are the key helpers to the community in performing religious activities. This groups after forming in 2019, have hire one house from within members and started processing Sang Zay.

The formation of groups at Merak has enable them to use available resources for economic benefits. Associated with high altitude which is accredited with rich medicinal plants and other species has idle place for incense production and sang zay. Although trend in Himalayan medicinal plants are threatened by large scale exploitation for trade and other illegal harvest, sanctuary has good resources that are being safely protected from the illegal traders.

Therefore the groups form by lay monks have advantages over resources because of their opulent knowledge in making different incense and sang zay, which will be used for religious purposes, that is missing at present.

The conservation management plan of sanctuary also state that NWFP local group formation will be focused to encourage people in conserving the environment and also to utilize the resources sustainably.

2: Goals and Objectives

1. Sustainable utilization and management of raw materials used in incense production
2. To generate income through sales of incense and other products
3. Provided employment opportunity for local community
4. Encourage the youth and women in developing NWFP related entrepreneurship.

3: Description of NWFPs:

Table 1. Description of Non-wood Forest Products (NWFP)

NWFP name	Harvesting areas (Name)	Parts harvested	Use purpose (traditional and others)	Harvesting season (months)	Estimated quantity that can be collected
Balu	Kayakpa,	Leave	Incense stick and raw dried leave/powder	September and October	100 kg
	Dangla,				200 kg
	Lumbur,				150 kg
	Jomo Phodrang.				100 kg
Sulu	Kayakpa,	Leave	Incense stick and raw dried leave/powder	September and October	150 kg
	Dangla,				150 kg
	Lumbur,				215 kg
	Jomo Phodrang				200 kg
Baa-po	Jomo Phodrang,	Flower	Incense	August and September	1 kg

Bamboo	Narnga nang	Leaves	Incense stick		5 Kg

Table 2: Harvesting prescription for sustainable Harvesting

NWFP Species Name	Harvesting prescription for sustainable harvesting
Balu (Rhododendron anthopogon)	Description This is probably one of the smallest of rhododendrons. Grows to no more than 2-3 feet high. The species is found in Merak with rocky slopes and cliff ledges with altitudinal range of 3600 to 4600 masl. Leaves are ovate, shortly micronate, base rounded, sparsely scaly above and densely scaly beneath with lacerate scales. Flowers 5-10 in dense sub capitates racemes with short pedicels, corolla salver-shape 5 lope, white pink or yellow. Harvesting Guidelines and Harvesting Techniques With using sharp knife or scissors cut the branches in order to collect leaves and twigs. Unsharpened equipment may cause more damage to the plants While collecting leaves and twigs ensure that you collect at maximum 20% of the leaves and twigs from an individual shrub in order to avoid over harvesting. Uprooting of whole plants from areas is not allowed. Harvesting Limit The amount of harvesting of raw materials (Balu) is as quantified in the collection plan for controlling over – harvesting and to ensure sustainable harvesting. At individual level they limit intensity of collection by allowing only 20% of the leaves and twigs from individual shrub.
Sulu (Rhododendron setosum)	Description Bristly Rhododendron is a small shrub with pink – purple, funnel-shape, and deeply 5 lobes flowers. Stamens are 10, longer than the petals and spreading flowers are about 2.5 cm across, usually in cluster of 3, or sometimes more. Sepal cup is 6mm long, deeply lobed, scaly leaves are very small, oblong-elliptic blunt 0.8-1.2 cm, often with bristly in rolled margins scaly on both sides. Bristly Rhododendron is small shrub up to half a meter tall, with densely bristly-hairy branches. Harvesting Guidelines and Harvesting Techniques

	With Using sharp knife or scissors cut the branches in order to collect leave and twigs. Unsharpened equipments may cause more damage to plants. While collecting leaves and twigs ensure that you collect maximum of 20% of the leaves and twigs from an individual shrubs to avoid over harvesting. Uprooting and removing of whole plants is no recommended and should refrain. Harvesting Limits The amount of harvesting of raw materials (Sulu) is as quantified in the collection plan for controlling over-harvesting and to ensure sustainable harvesting. At individual level they limit intensity of collection by allowing only 20% of the leaves and twigs from an individual shrub.
Dried and fallen Juniperus species (Shupshing)	Description It may be trees or shrubs up to 20m or 30m tall respectively leaves needles-like and arrange on main shoot and 4-ranked scale-like leaves on branches lets, flaky brown bark, scale overlapping and it produces slender leafy shoot. Female cone consisting of 3-8 scales which become fleshy and coherent forming berry-like fruits, it is globose when young and ovoid when ripe. Seed are usually solitary thick and hard. Harvesting Guidelines and Harvesting Techniques With the help of harvesting equipments (Axe, knife and Power chain) cut the dried and felled Juniper trees into small log or into a firewood size. Further with using sharp knife cut the log into small slice to ease the transportation. Dispose the debris after the harvesting. Do not fell the surrounding trees in order to clear the areas to ease the harvesting. Collection of dried and felled Juniper from areas is strictly prohibited. Do not drag the junipers logs for transportation to prevent rill formation. Felling of standing Juniper trees is not permitted. Collection of dried and fallen Juniper shall be collected along the transmission lines and along the geog center road. However, depending upon the availability, the collection shall be done in other areas as specified in the collection areas.

	Harvesting Limits
Baa-po (<i>Saussurea gossipiphora</i>)	Description All of them are herbaceous plant that have green, tender and lacks a woody stem. They have a short lifespan and can live only for one or two seasons. They are shorter in size, and they may grow between 2 to 3 meters tall. Harvesting Guidelines and Harvesting Techniques Since whole stem with leafs are used for the incense making, the stem will be cut down from the ground level with the help of knife, large scissor and pruning shear. Harvesting Limits Collection of the resources will carry out strictly as per the time framed. It is mainly to let seed mature and disburse in the area for continuation of the species. Secondly, uprooting of the plant is prohibited for sustainability of the resources.
Gya-po (<i>Tanacetum atkinsonii</i>)	
Khan-po (<i>Pluerospermum species</i>)	
Gurgum poe (<i>Soroseris hookeriana</i>)	
Atrung karmo (<i>Ajania nubigenum</i>)	
Yulu (<i>Cassiope fastigiata</i>)	
Shalley karmo (<i>Thamnolia vermicularis</i>)	Description <i>Thamnolia</i> is a genus of lichens in the family <u>Icmadophilaceae</u> . Members of the genus are <u>commonly called</u> whiteworm lichens . Harvesting Guidelines and Harvesting Techniques Whole body is used as incense. Thus, it is advised to handpick the lichens. Use of any means of equipments is prohibited. Harvesting Limits Only 20% of the total resources available will be collected from the area.
Ringu (<i>Swertia wardii</i>)	Description Perennials 30-80 cm tall. Rhizomes blackish, short, with few slightly fleshy rootlets. Stems erect, striate, simple,

	base sheathed by blackish remains of old petioles. Basal leaves petioles flattened, 4-15 cm, base connate; leaf blade lanceolate to narrowly elliptic, 3.5-14 × 2-3 cm, base narrowed, apex acute to obtuse, veins 5-7. Stem leaves sessile or with connate short petioles; leaf blade lanceolate to narrowly elliptic, 1.5-10 × 0.5-1.8 cm, base obtuse to rounded, apex obtuse, midvein distinct. Inflorescences paniculate or racemelike. Flowers 5merous. It is usually found at an altitudinal range of 3800-5200 m. Harvesting Guidelines and Harvesting Techniques With the help of hoe, the resources will be collected from the area mentioned above. Harvesting Limits Only 20% of the total resources available will be collected from the area.
Laskang (<i>Elsholtzia fruticosa</i>)	Description Herbs, subshrubs or shrubs, often aromatic. Stems usually quadrangular. Leaves simple, rarely pinnatisect or compound, opposite and usually decussate or rarely whorled. Stipules absent. Inflorescence of cymes, often condensed, paired and appearing as whorls (verticillasters) in spike-like, capitate or paniculate arrangements, occasionally cymes pedunculate and lax, forming a panicle. Elevation – From 2130-3505m Harvesting Guidelines and Harvesting Techniques The leaf/stem shall be collected using knife or sickle. Harvesting Limits Only 20% of the total resources available will be collected from the area.
Pangpo (<i>Nardostachys jatamansi</i>)	Description <i>Nardostachys jatamansi</i> is a flowering plant of the valerian family that grows in the Himalayas. It is a source of a type of intensely aromatic amber-colored essential oil, spikenard. The oil has, since ancient times, been used as a perfume, as a traditional

	medicine, and in religious ceremonies. It is also called spikenard, nard, nardin, or muskroot. Elevation- From 3,000–5,000 m Harvesting Guidelines and Harvesting Techniques Roots shall be dug out using hoe and any balance naked root should be covered back by soil. Harvesting Limits 20 % of the resource shall be dug from every patch of the plants.

E	Price per unit paid to group members (C/1a)					
---	---	--	--	--	--	--

As projected in the above table, annually the group shall reap the investment return of Nu: 764,400 (Seven lakh sixty four thousand four hundred) only as total benefit and Nu: 127,400 (One lakh twenty seven thousand four hundred) only as average income for every member in the group. The fund shall resolve in the following year to meet the mobilization expenses, small infrastructure development, and institutional strengthening benefactor.

Part B

By-Laws.

Membership arrangement and resignation

A. New membership.

1. Any interested individuals who wants to be a new members should submit application to the CCKT committee.
2. Then he/she should be accepted by groups and required approval from the whole committee of CCKT.

3. The committee of CCKT will accept to the membership after discussion within the members
4. The new member have to undergo six month probation period to examine the actual interest of the person or household before becoming regular member.
5. If the person fulfils or found to be genuinely interested, then he became membership after recommendation from committee. The new membership has to bear an amount of Nu: 1000/- annually that will count from the beginning of the plan period maintain by groups. The reference year is 2013.

B. Member Resignation

1. The resignation of member due to his or her inability to contribute in groups may get resigned after deciding by CCKT. He/she will be get equal share from the groups with addition amount of Nu:6,000 as a condolence/semso from the members.
2. Any member resigning of his own wish shall not be paid with any benefit share from the groups.
3. A member's repeated negligence more than thrice to prescribed terms of CCKT shall be terminated upon discussion within the members. No benefits shall be given to the terminated member.

Note: All accessories/equipment's belonging to the CCKT shall be handed over to the CCKT member accordingly before the member get resign.

Responsibilities and rights of members

Rights:

1. All properties including machineries and permanent structures belongs to all member of CCKT.
2. Any product produced from the unit belongs to the member.
3. All the amount accumulated from the unit by the members belongs to all member.
4. CCKT members have the right to collect resources from the designated areas which is mentioned in this Management Plan.
5. All members have the right to know the financial trends and properties at any time.

Responsibilities:

1. Every member should take care of the properties.
2. The CCKT member should manage and organize productions to market accordingly.
3. Timely collection of raw materials by members as per prescribed methodology.
4. Taking ownership and protection from unsustainable harvesting at designated resource collection sites by members.
5. Corporate and work with integrity and listen to chairman and committee.

Executive committee of NWFP management and marketing group

Chairperson

Name of and contact number: Geyshey Tashi Wangdi, 17955356

Responsibilities of Chairperson:

1. Organize committee meetings or consultations whenever required.
2. Lead in preparing annual work plan and implementing of daily activities.
3. Received of Guest and explain goal and aim of the groups and other out comes.
4. Facilitated and lead in marketing the products.
5. Co-ordinate and improve the group by improving networking with other stakeholders.
6. Financial management and verifications.
7. Resolve any conflict within members.

Secretary

Name and Contact number: Tashi Norbu, 17980152

Responsibilities of Secretary:

1. Assist or lead any committee meetings or consultations.
2. Assist annual work plans and daily activities.
3. Guest entertainment and facilitation.
4. Assist to look for market to sale the products.
5. Assist to Co-ordinate and make linkage to the stakeholders.
6. Assist to Co-ordinate unit improvement and development activities.
7. Assist financial management and verifications.
8. Assist to resolve any conflict within members.
9. Record keeping and office management.

Treasurer

Name and contact number: Phuntsho Wangdi, 17702109

Responsibilities of Treasurer:

1. Maintain records of all financial transaction.
2. Receiving of money and issuance if money receipt.
3. Collection of membership fees and fines.
4. Take ownership of cashbooks and bank balance book.
5. Deposit group fund Declare financial status to the committee members during meetings every six months.
6. Assist chairman and secretary when needed,

Tenure of committee member

Two year

Incentives to the committee members

1. Chairperson: Nu. 4000/-
2. Secretary: Nu.3000/-
3. Treasurer: Nu.3000/-

The incentives for the committee member shall be paid annually. If any of committee member or group member need to attend any meetings, workshops and trainings outside the Gewog, expenses incurred shall be meet from group fund upon proper verification of bills by group if organizer does not provide TADA.

Sources for generation group fund

Membership registration fees.

Nu.1000/- per head

Annual contribution

Nu.1000/- per head

Collection from sale proceeds

All profit are deposited in joint account

Group fund management and utilization

The group will keep the fund in joint account of CCKT.

10 percent percent of fund will be allotted to meet office expenses in a year

Deposit fund in bank will be withdrawn by committee member.

Conflict resolution

In case disputes or conflicts arises; the matter shall be resolved by chairperson and committee, Park Range Office, Chief Forestry Office, Gewog Tshogchung (GT) Dzongkhag Tshogdue (DT) for further decision.

Meeting and purpose

General meeting: Two times (First week of June and December)

Penalties

What penalties will be imposed for the following

- Non-payment of annual fees (Chairman will remind twice in written and in third time, chairman will give time for the termination of membership).
- Not showing up in meeting or coming for meeting very late (late fee of Nu.100/- and absent fee of Nu.600/-)
- Collection and sale of NWFPs in not adherence to group agreed norms. (Fine of Nu.500/- for first time, second time Nu.1000/-, and for the third time and above CCKT group will decide)
- Misuse of group fund by committee member. (5 percent penalty of the misused amount in addition to principle amount)
- If selected committee do not carry out the responsibilities mentioned in the plan. (Fine of Nu.500/- for first time, second time Nu.1000/-, and for the third time and above CCKT group will decide).
- Members not obeying to committee members for the work mentioned in the plan. (Nu.650/- fine)
- Misuse of group equipment and properties (Fine of Nu.650/- or replacement of equipment if damaged).
