Introduction

Sakteng Wildlife Sanctuary (SWS) is one of the ten protected areas declared by the Royal Government of Bhutan under the farsighted leadership of His Majesty the fourth Druk Gyalpo Jigme Singye Wangchuck. With an assemblage of rich ecosystem diversity and distinctive culture, it is home to some of the rarest and globally threatened wild flora and fauna. The area is adorned with diverse ecosystem ranging from warm broadleaved forests to alpine meadows. SWS is the only protected area with highest diversity of Rhododendron species (41 species) in the country. To protect and conserve this diverse assemblage of biodiversity and unique cultural heritage, the SWS was operationalized in 2003 with financial support from RGoB and WWF. In 2013, the Sanctuary was proposed to be designated as one of the four PAs to be included under World Heritage site.

Located in easternmost part of the country, it has an area of 740.60 km² encompassing Merak and Sakteng Gewogs (cluster of villages under one local administrative unit) under Trashigang Dzongkhag (district) and a part of Lauri Gewog under Samdrup Jongkhar Dzongkhag. The Sanctuary also shares border with the Indian State of Arunachal Pradesh in the East and North. For promoting a healthy faunal population, the Sanctuary is well connected by biological corridor to Jomotshangkha Wildlife Sanctuary forming a part of the Bhutan Biological Conservation Complex (B2C2).

The Sanctuary can be categorized into three climatic zones – subtropical, temperate and alpine zone. Major part of the Sanctuary area falls under temperate zone characterized by cold winter and warm summer. Highest rainfall occurs in the months of June to August and snowfall starts from October to April. Three river systems– Gam-ri, Mera-ama-ri and Jomo-ri originate from the Sanctuary

About Kuenphen Poina Tshogpa

The Kuenphen Poina Tshogpa (NWFP) management group focuses on production of incense sticks from the scented flora of Merak valley, under Trashigang Dzongkhag. It is located at Merak which is 65 km away from the Dzongkhag Administration. Kuenphen Poina Tshogpa was formed by seven interested household under Merak village for sustainable extraction of the materials with an aim to improved their social-economic status.

With total area of 867.7 km² Merak shares boundaries with Sakteng, Kangpara Shongphu Geogs in Bhutan while it touches the Indian state of Arunachal Pradesh in the East. The geog has about

1957 people with 231 households. The geog is rich in incense production materials such as Juniper spps, Rhododendron spps. and *Nardostachys jatamansi* making NWFP group formation feasible. Before formation of group the resources were collected by many individual after availing permit from forest office. The group has come up with such idea that the resources are collected on sustainable basis with elementary management plan.

The group was formed with an aim to improve the living standard through income generation. The practice of individual harvesting were done before for domestic consumption which lead to misuse of resources.

Objectives

1. Sustainable utilization and management of NWFP species (for incense production)
2. Preserve culture of incense production (materials used for ceremonial burnings)
3. Improve local livelihood through income generation
4. Stewardship towards resources

Description of NWFPs:

Table 1. Brief Description of NWFP for commercial Harvesting

NWFP name	Harvesting areas (Name)	Parts harvested	Use purpose (traditional and others)	Harvesting season (months)	Estimated quantity that can be collected
Balu (<i>Rhododendron anthopogon</i>)	Kayakpa,	Leave	Incense stick and raw dried leave/powder	September and October	200 kg
	Dangla,				250 kg
	Lumbur,				300 kg

	Jomo Phodrang.				300 kg
Sulu (<i>Rhododendron setosum</i>)	Kayakpa,	Leave	Incense stick and raw dried leave/powder	September and October	300 kg
	Dangla,				250 kg
	Lumbur,				350 kg
	Jomo Phodrang				550 kg
Baa-po (<i>Saussurea gossypiphora</i>)	Jomo Phodrang,	Flower	Incense	August and September	2 kg
	Yangle Yanchung				3 kg
Gya-po (<i>Tanacetum atkinsonii</i>)	Yangle Yangchung,	Leave and stem	Incense	August and September	4 kg
Yulu (<i>Cassiope fastigiata</i>)	Kayakpa,	Leave and stem	Incense	August and September	10 kg
	Jomo Phodrang				15 kg
Atrung karmo (<i>Ajania nubigenum</i>)	Shukteng,	Leave and stem	Incense	August and September	2 kg
	Kamlung				1 kg
Shalley karmo (<i>Thamnia vermicularis</i>)	Jomo Phodrang,	Whole body	Incense	September and October	2 kg
	Lumbur,				1 kg
	Kayakpa				1 kg
Pang-po (<i>Nardostachys jatamansi</i>)	Dangla,	Root	Incense	October and November	1 kg
	Serphu				1 kg
Khanpo (<i>Pluerospermum species</i>)	Nakarmo,	Root	Incense	September and October	2 kg
	Lumbur				2 kg
Ringu (<i>Swertia wardii</i>)	Bezhi,	Root	Incense	October and November	1 kg
	Jomo Phodrang				1 kg
Laskang (<i>Elsholtzia fruticosa</i>)	Chebling,	Leave	Incense	September and October	10 kg
	Sheteymey				5 kg
Gurgum po (<i>Soroseris hookeriana</i>)	Jomo Phodrang,	Leave and flower	Incense	September and October	1 kg
	Kayakpa,				1 kg
	Lumbur				
Shub Shing (<i>Juniperus species</i>)	Sak Shom,	Leave and trunk	Incense stick and powder	Based on prior approval	1 truckload
	Charam,				1 truckload
	Gongma Zop				1 truckload

Table 2: Harvesting prescription for sustainable Harvesting

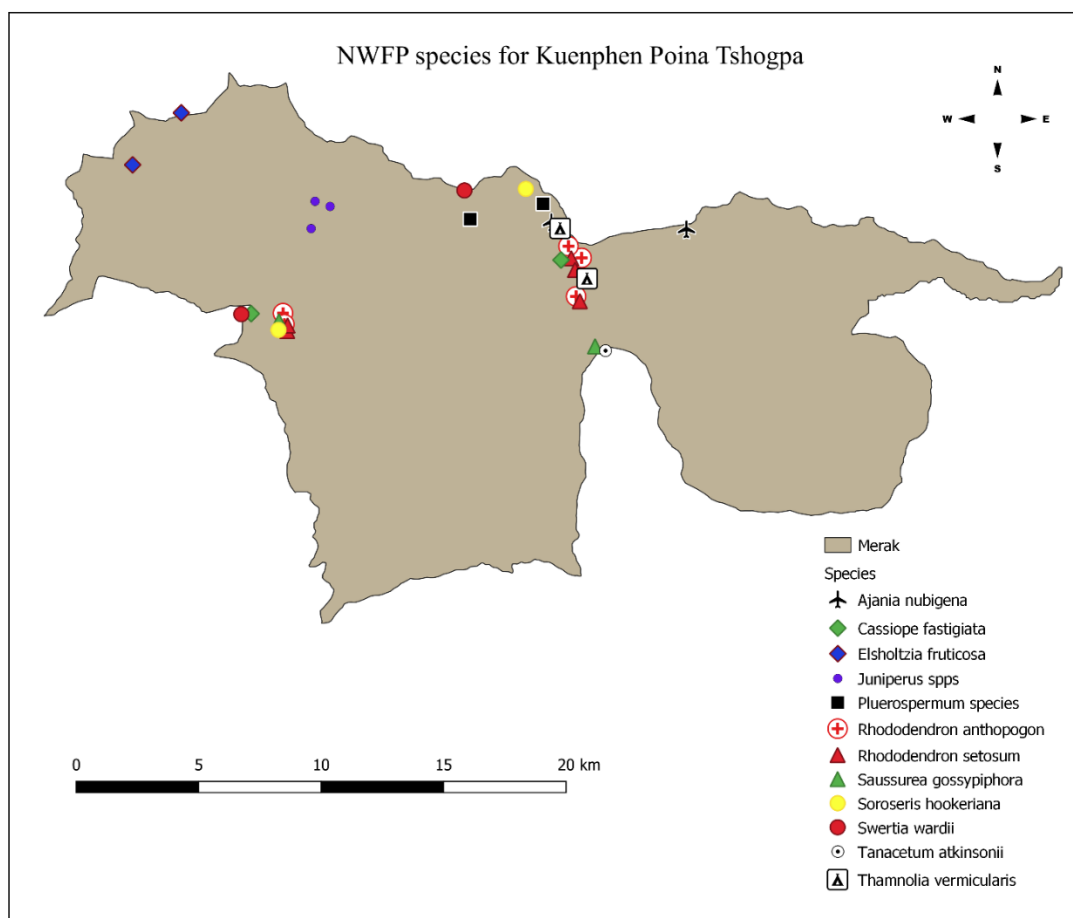

NWFP Species Name	Harvesting prescription for sustainable harvesting
Balu (Rhododendron anthopogon)	Description This is probably one of the smallest rhododendrons. Grows to no more than 2-3 feet high. The species is found in Merak with rocky slopes and cliff ledges with altitudinal range of 3600 to 4600 masl. Leaves ovate, shortly micronate, base rounded, sparsely scaly above and densely scaly beneath with lacerate scales. Flowers 5-10 in dense sub capitates racemes with short pedicels, corolla salver-shape 5 lope, white, pink or yellow. Harvesting Guidelines and Harvesting Techniques By using sharp knives or scissors cut the branches to collect leaves and twigs. Unsharpened equipment may cause more damage to the plants While collecting leaves and twigs ensure that you collect at maximum 20% of the leaves and twigs from an individual shrub to avoid overharvesting. Uprooting of whole plants from areas is not allowed. Harvesting Limit The amount of harvesting of raw materials (Balu) is as quantified in the collection plan for controlling over harvesting and to ensure sustainable harvesting. At individual level they limit the intensity of collection by allowing only 20% of the leaves and twigs from individual shrub.
Sulu (Rhododendron Setosum)	Description Bristly Rhododendron is a small shrub with pink – purple, funnel-shape, and deeply 5 lobes flowers. Stamens are 10, longer than the petals and spreading flowers are about 2.5 cm across, usually in cluster of 3, or sometimes more. Sepal cup is 6mm long, deeply lobed, scaly leaves are very small, oblong-elliptic blunt 0.8-1.2 cm, often with bristly in rolled margins scaly on both sides. Bristly Rhododendron is a small shrub up to half a meter tall, with densely bristly-hairy branches. Harvesting Guidelines and Harvesting Techniques Using a sharp knife or scissors cut the branches to collect leaves and twigs.

	Unsharpened equipment may cause more damage to plants. While collecting leaves and twigs ensure that you collect a maximum of 20% of the leaves and twigs from an individual shrub to avoid overharvesting. Uprooting and removing of whole plants is not recommended and should be refrained. Harvesting Limits The amount of harvesting of raw materials (Sulu) is as quantified in the collection plan for controlling over-harvesting and to ensure sustainable harvesting. At individual level they limit intensity of collection by allowing only 20% of the leaves and twigs from an individual shrub.
Dried and fallen Juniperus species (Shupshing)	Description It may be trees or shrubs up to 20m or 30m tall respectively. Leaves are needle-like and arranged on main shoot and 4-ranked scale-like leaves on branches. Bark is flaky brown, scale overlapping and it produces slender leafy shoot. Female cone consists of 3-8 scales which become fleshy and coherent forming berry-like fruits, it is globose when young and ovoid when ripe. The seeds are usually solitary thick and hard. Harvesting Guidelines and Harvesting Techniques With the help of harvesting equipment's (Axe, knife and Power chain) cut the dried and felled Juniper trees into small log or into firewood sizes. Further using sharp knife, cut the log into small slices to ease the transportation. Dispose the debris after harvesting. Do not fell the surrounding trees to clear the areas to ease the harvesting. Collection of dried and felled Juniper from areas is strictly prohibited. Do not drag the junipers logs during extraction to prevent rill formation. Felling of standing Juniper trees is not permitted. Collection of dried and fallen Juniper shall be collected along the transmission lines and along the gewog center road. However, depending upon the availability, the collection shall be done in other areas as specified in the collection areas.
Baa-po (<i>Saussurea gossipiphora</i>)	Description All these are herbaceous plants that are green, tender and lack a woody stem. They have a short lifespan of one to two seasons. They are shorter in size, and they may grow between 2 to 3 meters tall. Harvesting Guidelines and Harvesting Techniques Since whole stem along with leaves are used for incense making, the stem will be cut down from the ground level with the help of knife, large scissors and pruning shear. Harvesting Limits
Gya-po (<i>Tanacetum atkinsonii</i>)	
Khan-po (<i>Pluerospermum species</i>)	
Gurgum poe (<i>Soroseris hookeriana</i>)	
Atrung karpoo	

(<i>Ajania nubigenum</i>)	Collection of the resources will be carried out strictly as per the time framed. It is mainly to let seed mature and disburse in the area for continuation of the species. Secondly, uprooting of the plant is prohibited for sustainability of the resources.
Yulu (<i>Cassiope fastigiata</i>)	
Shalley karpō (<i>Thamnotia vermicularis</i>)	Description <i>Thamnotia</i> is a <u>genus</u> of <u>lichens</u> in the family <u>Icmadophilaceae</u>. Members of the genus are <u>commonly called</u> whiteworm lichens. Harvesting Guidelines and Harvesting Techniques The whole body is used as incense. Thus, it is advised to handpick the lichens. Use of any means of equipment is prohibited. Harvesting Limits Only 20% of the total resources available will be collected from the area.
Ringu (<i>Swertia wardii</i>)	Description Perennials are 30-80 cm tall. Rhizomes blackish, short, with few slightly fleshy rootlets. Stems erect, striate, simple, base sheathed by blackish remains of old petioles. Basal leaves petioles flattened, 4-15 cm, base connate; leaf blade lanceolate to narrowly elliptic, 3.5-14 × 2-3 cm, base narrowed, apex acute to obtuse, veins 5-7. Stem leaves sessile or with connate short petioles; leaf blade lanceolate to narrowly elliptic, 1.5-10 × 0.5-1.8 cm, base obtuse to rounded, apex obtuse, midvein distinct. Inflorescences paniculate or racemelike. Flowers 5merous. It is usually found at an altitudinal range of 3800-5200 m. Harvesting Guidelines and Harvesting Techniques With the help of the home, the resources will be collected from the area mentioned above. Harvesting Limits Only 20% of the total resources available will be collected from the area.
Laskang (<i>Elsholtzia fruticosa</i>)	Description Herbs, subshrubs or shrubs are often aromatic. Stems are usually quadrangular. Leaves are simple, rarely pinnatisect or compound, opposite and usually decussate or rarely whorled. Stipules are absent. Inflorescence of cymes, often condensed, paired and appearing as whorls (verticillasters), in spike-like, capitate or paniculate arrangements, occasionally cymes pedunculate and lax, forming a panicle. Elevation – From 2130-3505m Harvesting Guidelines and Harvesting Techniques The leaf/stem shall be collected using a knife or sickle. Harvesting Limits

	Only 20% of the total resources available will be collected from the area.
Pangpo (<i>Nardostachys jatamansi</i>)	Description <i>Nardostachys jatamansi</i> is a flowering plant of the valerian family that grows in the Himalayas. It is a source of a type of intensely aromatic amber-colored essential oil, spikenard. The oil has, since ancient times, been used as a perfume, as a traditional medicine, and in religious ceremonies. It is also called spikenard, nard, nardin, or muskroot. Elevation- From 3,000–5,000 m Harvesting Guidelines and Harvesting Techniques Roots shall be dug out using hoe and any balance naked root should be covered back by soil. Harvesting Limits 20 % of the resource shall be dug from every patch of the plants.

NWFP Species Map

Marketing and Sales Plan

(Describe the products, the potential markets where you intend to sell your products, the estimate quantity, the price per unit and the total value of your expected sales)

NWFP	Potential market	Estimated quantity for sale per season (unit)	Expected price per unit (Nu)	Total (Nu)
Balu	NWFP traders, incense factories, local people, shops and local dealers.	1050 kg	40	42,000
Sulu		1516 kg	40	60,640
Bapo				
Gyapo				
Yulu				
Atung Karpu				
Shalley Karpu				
Pangpoi				
Khanpo				
Ringu				
Laskang				
Gurgum Po				
Incense sticks		5000 bundles	20	100,000
Incense powder		6000 packets	35	210,000
Supply of raw materials	All mentioned incense materials	5 truckloads (who owns approval)	8000	40,000

Marketing Arrangements

To ensure equal access to the resources, the chairperson shall obtain the collection permit from the nearest forest office and shall announce the collection time as per the prescribed harvesting guidelines. All the collection members, including other community members nominated by the group, shall collect the resources individually. However, the collected resources should be brought to the collection point at Merak as specified by the Chairperson of the Tshogpa. The group shall include the quantity in the stock register for further payment and marketing. The chairperson shall then sell the incense resources as raw materials or incense sticks to the buyers as per the rate mentioned in the above table.

Table 4: Financial projection of the benefits to the members from NWFP sales (Optional)

Sl. No	Particulars	Product Name				Total Amount (Nu)
		Mixed Sangzey	Incense stick	Incense powder	Raw materials	

1	Revenue					
a	Total quantity (Unit)	2566 kg	5000 bundles	6000 packets	5 truckloads	13571
b	Market price (Nu per unit)	40	20	40	8000	
c	Total revenue from forest product sales (a*b)	102,640	100,000	240,000	40,000	
A	Total revenue	102,640	100,000	240,000	40,000	482,640
2	Expenses					
a	Packaging materials	10,000	12,000	10,000	4,000	36,000
b	Royalty	2,000				2000
c	Transportation costs	5,000	5,000	5,000	5,000	20,000
d	Compensation fee to the executive committee for marketing products	NA	NA	NA	NA	NA
e	Contribution to community development fund	NA	NA	NA	NA	
f	Incidental expenses	NA	NA	NA	NA	
B	Total expenses	17,000	17,000	15,000	9,000	58,000
C	Total benefit (net income) of group members (Total revenue A – Total revenue B)	85,640	83,000	225,000	31,000	424,640
D	Average income to group members (C/ No. of group members)					60,662.86
E	Price per unit paid to group members (C/1a)	33.37/kg	16.6/bundle	37.5/bundle	6200/TL	

As projected in the above table, annually the group shall reap the investment return of Nu: 424,640 (Four lakh twenty-four thousand six hundred forty) only as total benefit and Nu: 60,662.86 (Sixty thousand six hundred and sixty-two and eighty-six chetrum) only as average income for every member in the group. The fund shall resolve in the following year to meet the mobilization expenses, small infrastructure development, and institutional strengthening benefactor. However, based on the feasibility and availability of the resources, it is projected that the sales of Juniper is comparatively more likely to increase the income of the group followed by Sulu, incense stick and sales of Balu that might contribute least amount amongst others.

Part B

By-Laws. Group regulations and Norms

Members of the NWFP management & Marketing group	Village	Numbers of Households	Geog
	Khatoe	5 Hhs	Merak
	Khamoe	2 Hhs	Merak
Membership arrangement and resignation	A. New membership. Any new membership will be accepted with prior acceptance and concern from the whole committee of KPT. 1. Within family: Nu. 5, 000/- as a member fee. Members willing to join need to apply to the management of KPT. 2. Outside family: Nu. 30, 000/- as a fee for new membership (paid at once or on an installment basis of 10,000 within a year) and application to be submitted to the management of KPT.		
	B. Member Resignation 1. Conditional resignation: Member resigning due to inconvenience will be paid with benefits after a consultation within the committee (His/her own share from the amount accumulated and 5,000 as Semso decided by the member themselves) by the prior consultation within the members for his contribution to the KPT. 2. Purposeful resignation: A member resigning with other personal purposes and willingness shall not be entertained with any benefits/share from KPT. 3. Membership termination: A member's repeated negligence more than thrice to prescribed terms of KPT shall be terminated upon discussion within the members. No benefits shall be given to the terminated member. Note: All accessories/equipment belonging to the KPT shall be handed over to the KPT member accordingly by the outgoing member prior to his/her resignation.		

Responsibilities and rights of members:	<i>Rights:</i> 1. All properties, including machinery and permanent structures belong to the member of KPT. 2. Any product produced from the unit belongs to the members. 3. All members have the right to funds/amounts generated from the sale of products. 4. KPT members have the right to collect resources from the areas reflected in the management plan. 5. There shall be transparency among the members regarding the financial trends and properties. <i>Responsibilities:</i> 1. Every member shall be responsible for the property. 2. All members shall be accountable for the loss of accessories. 3. All KPT members manage and market the products accordingly. 4. All members should engage in the collection of raw materials as per the prescribed methodology. 5. Every member shall be responsible for managing and collecting the resources sustainably. Take ownership of designated resource collection area. 6. All members shall comply as per the instruction from the chairperson
--	--

Executive Committee

Chairperson	Name of the Chairperson: Jurmey
	Contact number: 17485844 ➤ Responsibilities of Chairperson: ❖ Organize committee meetings or consultations. ❖ Lead annual work plans and daily activities. ❖ Guest entertainment and facilitation. ❖ Explore market opportunities for sale of products. ❖ Co-ordinate and make linkage to the stakeholders. ❖ Co-ordinate unit improvement and development activities. ❖ Financial management and verifications. ❖ Resolve any conflict between members.
Secretary	Name of secretary: Tshewang Dorji
	Contact number: 17823615/17609602 ➤ Responsibilities of Secretary: ❖ Assist or lead any committee meetings or consultations. ❖ Assist annual work plans and daily activities. ❖ Guest entertainment and facilitation. ❖ Assist in exploring market opportunities. ❖ Assist in coordinating and making linkage to the stakeholders. ❖ Assist in coordinating unit improvement and development activities. ❖ Assist in financial management and verifications.

	❖ Assist to resolve any conflict within members. ❖ Record keeping and office management.
Treasurer	Name of Treasure: Tenzin Choden
	Contact number: 17621698/17779302 ➤ Responsibilities of Treasurer: ❖ Maintain records of yearly financial transactions. ❖ Receiving and issuance of money receipt. ❖ Collection of membership fees and fines. ❖ Take ownership of cash books and bank balance books. ❖ Deposit group fund, declare financial status to the committee members during meetings every six months. ❖ Assist chairman and secretary when needed
Tenure of committee member	5 Years
Incentives to committee member	1. Chairperson: Nu. 4000/- 2. Secretary: Nu.3000/- 3. Treasurer: Nu.3000/- The incentives for the committee member shall be paid annually. If any of the members attend any meetings, workshops or training outside Gewog without any TADA entitlement from the organizer, the expenses incurred shall be met by the group fund upon proper verification of bills.
Membership fee and Purpose	Initially to strengthen the financial stand the group members should contribute Nu: 500 (Five hundred) and membership fee of Nu: 500 annually. Depending upon the financial capacity of the members, membership fee might increase or decrease from prescribe annual rate.

Community Development fund and utilization of fund	Expenditure for harvesting, transportation and production cost includes wages for the processing of raw materials and collection of the viable incense plants from the sources to the processing unit and then to the nearest market or to the nearest market or to the nearest consumer. Purchase of office stationery/properties. Maintenance of production units to sustain production, we shall improve the enterprise infrastructure and technology in pristine state. For charity purposes/donation Loan facilities. With the security amount of Nu: 25,000:00 (Twenty-five thousand) only group will grant small grant loan of Nu: 20,000:00(Twenty thousand) only to interested stakeholders. The refund will be within the premises of one year including interest at the rate of 5% per month. Annually, coordinator will convoke income generation meeting cum benefit disbursement convocation. With the minimum amount of Nu: 25,000:00 (Twenty-five thousand) only excluding all the expenses, the remaining will be shared within group with equal share. Furthermore, the special provision for poor, women-headed and disaster compensation will be given with certain percentage depending upon financial weak stand. Prior to the benefit sharing we shall work out the total expenditure needed in the following year and reserve the budget accordingly.
Conflict Resolution	In case disputes or conflicts arise, the matter shall be resolved by the chairperson and committee, Park Range Office, Chief Forestry Office, Gewog Tshogchung (GT) Dzongkhag Tshogdue (DT) for further decisions.
Group Fund management and utilization	➤ The funds generated will be deposited in the joint saving account of KPT. ➤ Annually, 10 percent of the funds will be allotted to meet office expenses. ➤ Deposit funds in banks will be withdrawn by committee members and maximum Nu. 20,000/- will be withdrawn.
Membership registration fees.	Nu.500/- per head
Annual contribution	Nu.500/- per head
Collection from sale proceeds	20%

Offence	Penalties
Non-payment of annual fees	Chairman to remind twice in written to the concerned member. If it persists, termination of membership (chairman to provide timeline)
Failure to attend the meeting or come to a meeting very late	Late fee of Nu.100/- and absentee fee of Nu.600

Collection and sale of NWFPs in non-adherence to group agreed norms	1 st Offence fine: Nu.500/- 2 nd Offence fine: Nu.1000/-, and 3 rd offence and above: KPT members to come up with a resolution
Embezzlement of group fund by committee member	5 percent penalty of the misused amount in addition to principal amount
If the members fail to comply with the bylaws of the management plan	1 st Offence fine: Nu.500/- 2 nd Offence fine: Nu.1000/-, and 3 rd offence and above: KPT members to come up with a resolution
Disobeying/failure to execute the work assigned to the members by executive members.	Nu.650/- fine
