Executive Summary

The Cheng village under Bumdeling Gewog is situated in north of the gewog centre and it is about 2 to 3 hours walk. The village comprises of 13 Households and it is connected with motorable road (Farm Road). There are about 120 people in the village and they largely depend on agriculture farming, livestock and forestry activities for their livelihoods and income generation. The farmers do off-farm labor work for the contractors to earn additional cash income for their families and education of their children. One of the main sources of income of the community people is from forest resources such as sale of Bamboo products, bamboo poles and Daphne barks etc.

So to further manage the resources such as bamboo (*Borinda grossa*), Daphne and Satuwa (*Paris polyphylla*) sustainably through equal distribution among members and generate income to enhance the livelihood, 13 HHs of the Cheng Village continued to form the Cheng NWFP management group. There are some elderly members who have indigenous knowledge to make different products from bamboos and they will continue to add value and generate more income for the group. Besides, the group will also focus on the marketing for surplus bamboos.

An area of 430.95 Hectares (Ha) of State Reserved Forest Land (SRFL) was revised and designated as Non Wood Forest Product collection area around their village. Within the area based on the availability of three prime products, collection sites were identified in consultation with the local community (group members). Later resources assessment was done as per the guidelines in place revealed that the Annual Harvesting Limit (AHL) of the products are; Bamboo (*Borinda grossa*) - 9983 culms format and 51493 culms for Tsar, Daphne bark – 286.52Kgs and Satuwa (*Paris polyphylla*) – 22.54Kgs. The group in the past management period generated maximum income from sale of “**Aurr**” - small bamboo to make traditional arrow. The annual income from the group was Nu. 15345 for the year 2021 which was low due to less market opportunities with onset of covid but group is planning to diversify their product and explore more market option in upcoming years. Moreover, the group agreed to continue the management and in the current plan they will focus on carrying out clearing of unwanted bushes, plantation and extension of small bamboo area.

PART A: NON WOOD FOREST PRODUCT MANAGEMENT PLAN

1. Introduction

The Bumdeling Gewog is located in north eastern part of Bhutan and it shares the border with Tibet and India in the northern part. The northern part of the gewog also falls inside Bumdeling Wildlife Sanctuary and the services related to forestry activities for general public are delivered from Dungzam Park Range at Bumdeling Gewog Centre. There are five Chiwogs in the gewog and with the fund support from gewog and through BWS, ten Community Forests Management Groups (CFMGs) and three Non Wood Forest Product Management Groups (NWFPMGs) were established as of now. With this, about 80% of the total HHs in the gewog is now beneficiary of CFs and NWFP Management Groups and they have easy access to the forest resources.

The Cheng village in Tarphe Chiwog under Bumdeling Gewog is situated in north of the gewog centre and it is about 2 to 3 hours walk. The village comprises of 13 Households and is connected with motorable road (Farm Road). There are about 120 people in the village and their main source of income is from agriculture farming, livestock and forestry activities. The farmers also do off-farm labor work in the construction company to supplement and support their children education. One of the main sources of income of the people is from harvesting and marketing of forest resources such as Bamboo products, bamboos and Daphne barks etc. beside collection of Cordyceps (*Ophiocordyceps sinensis*) after legalization in early 2004. However, HHs with fewer members couldn't benefit from it much as they could not go for collection on regular basis.

The forest area above Cheng village is rich in forest resources such as Bamboo (*Borinda grossa*) and *Fargesia* spp, Daphne (*Daphne bholua*) and Satuwa (*Paris pollyphylla*). So, to sustainably manage and avail the resources easily, generate income to alleviate poverty and enhance rural livelihood, the thirteen households in the village formed the management group in 2009 and it was revised later in 2018 after successful completion of first management plan. The community group also successfully completed the 2nd management plan (2018-2022) and they have applied to further extension/ revise of the plan.

The Bumdeling Wildlife Sanctuary with the fund support from Social Forestry and Extension Division (SFED), DoFPS revised the management plan in 2022. In the current five year

Management Plan from 2022 to 2027, the Cheng Non Wood Forest Product Management Group (CNWFPMG) will basically focus on management and improvement of the area. The group will carry out prescribed activities as per the work plan to achieve the objectives. The group is expected to primarily manage three main products such as Bamboo, Daphne and Satuwa. The members having indigenous knowledge to make bamboo products can continue making products and try to diversify the products so that more income can be generated. As of today, they make only few products such as **Dala (Winnower) ‘Bamboo bowl’, Blow/ Pari ‘Mat carpet’, Khompo “Basket’, Rope mat** and mostly market bamboo in raw material form without value addition.

Since there is no paper making cottage industry in the village the group sell Daphne bark to private entrepreneur/ cottage in Bumdeling. The group can collect and sell bark only two times in five year plan period. In case of Satuwa (*Paris polyphylla*), the group has to collect it in collection season and market as per the forestry rules. Collection in wrong season will lead to extinction of products from the area. The product had recognized its commercial market in last few year years people across the country have been harvesting without integration of scientific management system. With such indistinct, vague, and improper harvesting guidelines, the resources are heading toward margin of extinction and it concerned the environmentalist and naturalists.

1.1 Management Objectives of the NWFP Group

- To protect and manage the NWFP - Bamboo (*Borinda grossa*), Daphne and Satuwa/ Thoksampa (*Paris polyphylla*) sustainable manner.
- To have easy access to the forest resources
- To enhance rural livelihood through income generation through sale of products.

1.2 Traditional Rights

Every citizen of the country has right to avail forest resource as per the entitlement for domestic use and other purpose as enshrined in the Forest and Nature Conservation Act and Rules. The people also should be responsible in managing the resources in sustainable manner. Bamboos are considered ‘Poor man’s timber, Minor products, green gold and it can be used for various purposes. The people used to collect lavishly in the past without any restrictions. Likewise, the people of Cheng village also had easy access to the resource and

collected for just domestic use. Later, with first NWFP Group formation in 2009, the community started diversifying the products and generate income. The bamboo growing areas used for collection area by their grandparents are still used by present generation and they take responsibility to manage the resources for future generation. The management group formed also take responsibility to protect it from illegal collections.

In regards to Daphne and Satuwa, the community has easy access to resource and they have been collecting Daphne bark and selling to the cottage paper industry in Bumdeling valley and Yangtse geog. Though it fetches more prizes but the resource (harvestable) is very less and scarce in the forest as compared to bamboo. Satuwa has gained commercial market in last few years but due to unsustainable harvesting method and in wrong season nearly depleted the products in the area. It has to be collected in right season and only rhizome of plant that has reached to right height has to be collected.

1.3 Social Information

Table 01: Social information of Cheng community

Topic	Descriptions
Name of the village	Cheng
Ethnic groups with CFMG	Tshangla
Dialect	Zala kha, Dzongkha and Tshangla
Basic amenities	Proper sanitation, electricity, well protected spring water, access to road head.
Total household (HH) number of CFMG	13
Population of CFMG	120 heads
% male and % female	71 (Male), 66 (Female)
Main source of income	Sale of excess farm products and earning from off-farm activities such as sales of bamboo products and <i>Ophiocordyceps sinensis</i> .
Cattle population of CFMG	76
Main crops	Millet, Maize, Rice, Chilli and Potato
Cropping pattern	Mixed, double cropping
Average Annual Income	Nu. 0.1 million / year

If any add:	They collect <i>Ophiocordyceps sinensis</i> Annual income of group for 2021 was Nu. 15345
-------------	--

1.4 Forest information

Table 02: Forest information

Sl. No	Types	Description
1	Vegetation types	Cool broadleaved forest
2	Dominant species	<i>Sorbus cuspidata</i> , <i>Magnolia</i> sp., <i>Quercus semicarpifolia</i> , <i>Acer campbellii</i> , <i>Rhododendron arboreum</i> and <i>Symplocas</i> sp.
3	Associated species	<i>Viburnum erubescens</i> , <i>Smilax rigida</i> , <i>Eurya cerasifolia</i> , <i>Daphne</i> and <i>Borinda grossa</i> .
4	Elevation Range	

2. Traditional Management System

2.1 NWFP Management area description

The area for resource collection was identified and demarcated based on the traditional rights the local people of Cheng village for collection of resources. Around 430.95 Hectare of SRFL is designated as the area for NWFP collection through sustainable management. The boundary of the area is demarcated by permanent features such as streams/ Rivers, Ridges, Valleys and road/ trail. For instance, the boundary towards north is permanent stream (Kongkang Chhu) – N: 27°42' 7.09", E: 91°2' 30.1", East – Kholong Chhu River - N: 27°41' 19.8", E: 91°25' 10.2", South – Pamadung Ridge – N: 27°41' 56.1", E: 91°25' 16.1" and West – Shingey Phu (Ridge) – N: 27°41' 35.2", E: 91°24' 15.7". The area falls in Cool Broadleaved Forest at about 2600 masl.

In consultation with the members, the collection sites for different forest products were identified; Shingey Phu area as Block 1: Bamboo (*Borinda grossa*) collection area, Humtsong as Block 2: Small Bamboo (*Fargesia* spp.) Collection area mainly for making traditional arrow, Rigney Tshomo as Block 3: Daphne bark collection area, Ngashi as Block 4: Collection of *Paris polyphylla* and Lamwog as Block 5: Collection of Daphne and *Paris polyphylla*. Besides three main products, the sites are potential collection area for fern top,

mushroom and Damroo (*Elatostema*). The NWFPMG can also collect it and sale in the season as per the guidelines and by-laws.

2.2 Map of NWFP area

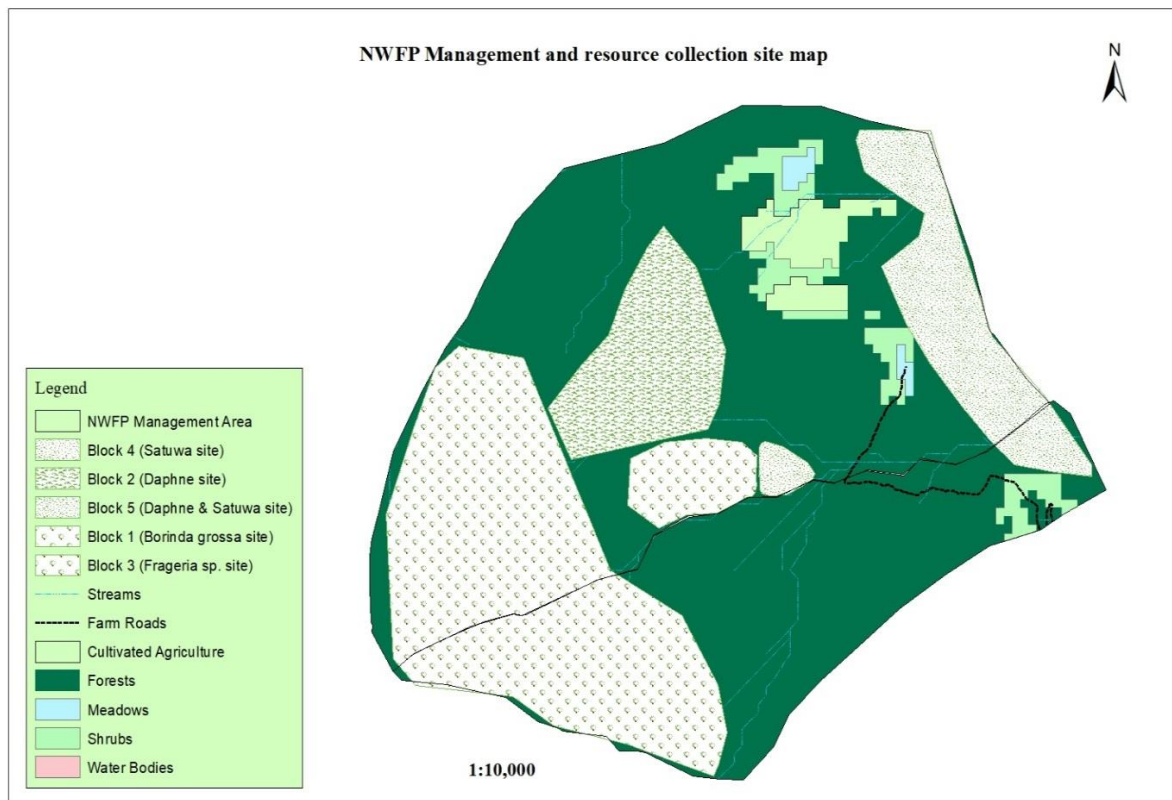

Figure 01: NWFP Management Area Map

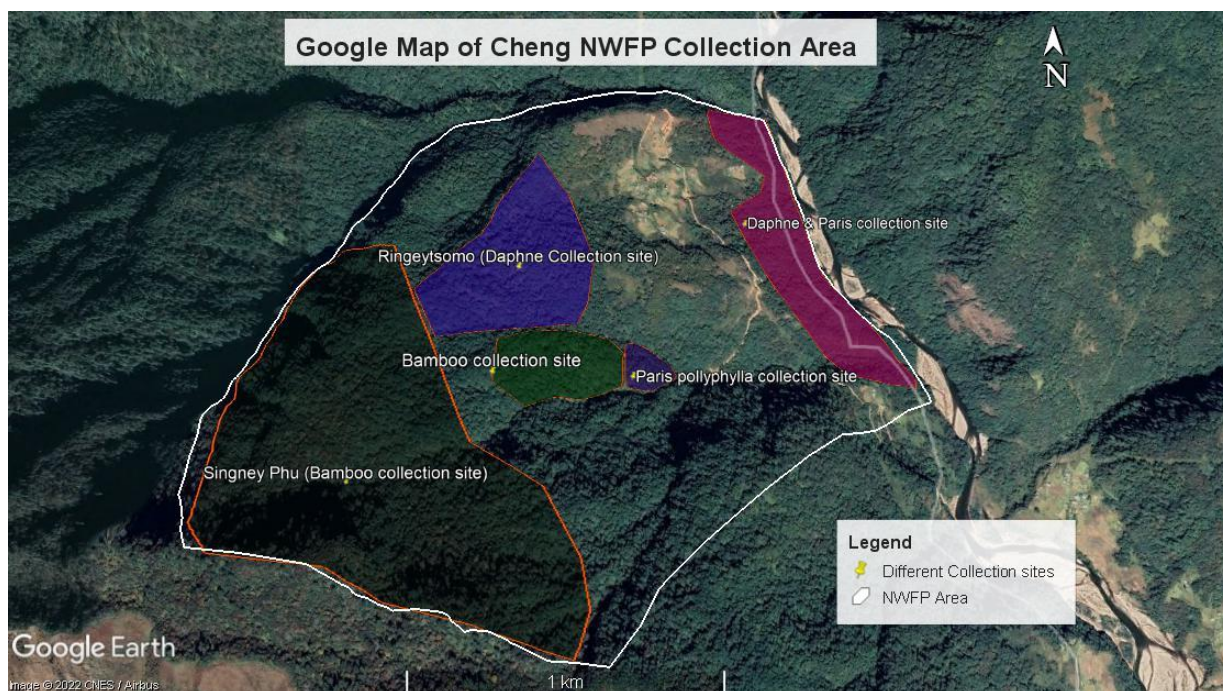

Figure 02: Google Map of NWFP collection sites

2.3 Bamboo Management System

The Cheng community is depended on Bamboo resources from the time immemorial for their livelihood. The main bamboo collection area is bit far from the village and the biotic pressure such as livestock grazing, collection of fuel wood in the area is very minimal. However, there is every chances that people from other village will extract illegally and may lead to depletion of the resource. So, the management group will protect the resources from over exploitation and manage in sustainable manner. There are two different areas growing different bamboo species viz, Bamboo (*Borinda grossa*) and *Fargesia* spp and both are equally important for the community to generate group income. In the past, the people have free access to the resource even without collection permit for domestic use. Now they can have access only after collecting collection permit from the group committee members. The system of management is basically to ensure that the resources do not deplete and it can be used by the future generation.

Block 2 is little bit closer to the settlement and it used to be free grazing area of the village but later with management group formation and then knowing the value of the bamboo for making traditional Arrow which generate more income for the group, the members stopped grazing in the area. The bamboos are cut and sold from this block which is commonly called

“**Cheng Aurr**” in their language meaning Cheng- *the village Name*, **Aurr**- *Arrow*. It is found to be best arrow and popular in Trashiyangtse and even sold outside the Dzongkhag. Slowly the product is gaining popularity in the local and regional markets. The harvesting of *Fargesia* spp is done through selection based on the quality of bamboo and considering other important features such as node, straight, size etc.

There is high chance of illegal collection from Block 1 by other villages and the group regularly monitors the site. The group collects two types of bamboo; Matured bamboo (i.e. more than 3 years) for just weaving bamboo mat and roofing and fencing purposes and immature (i.e. below 3 years) for making bamboo products such as baskets, containers, carpet etc. The immature bamboos are usually collected from 1st to 4th month of Bhutanese calendar while the matured bamboos are collected throughout the year depending on the requirement. The people of Cheng do not have any specific bamboo management practices. The harvesting of the bamboo for different purpose is based on the tradition passed down by their fore parents.

2.3.1 Block description for Bamboo

Overall, the bamboo collections sites are located within 3 Hours walk from the village and average slope of the forest is moderate. The dominant species are *Sobus cupidata*, *Quercus semicarpifolia*, *Rhododendron arboreum* etc. As of now no improvement activities had been carried out. However, in the current management plan period, the group is going to do the thinning, clearing of bushes and even plantation in the Humtsong Block. The community has scope to generate high income through value addition on the products than selling in raw form. However, the members do not have capacity to diversify the products.

2.3.2 Bamboo Block description Form –Filled from field

Name of Blocks: Shingey phu and Humtsong

Table 03: Block description form

Access	What is the walking distance from the nearest village to the bock?		
	Less than 3 hours	Within a day	More than a day
	What is the walking distance from the block to the nearest road?		
	Less than 3 hours	Within a day	More than a day

Slope	Very steep	Steep	Moderate	Gentle
-------	------------	-------	----------	--------

	>100%	70-100%	45-70%	<45%
--	-------	---------	--------	------

Forest Description	Dominant: <i>Sorbus cuspidata</i> , <i>Magnolia sp.</i> , <i>Quercus semicarpifolia</i> , <i>Acer campbellii</i> , <i>Rhododendron arboreum</i> and <i>Symplocas sp.</i> Associated species: <i>Viburnum erubescens</i> , <i>Smilex rigida</i> , <i>Eurya cerasifolia</i> , <i>Daphne</i> and <i>Borinda grossa</i> .
---------------------------	--

Block No	Block Name	Productive area (Ha)	No. of sample plots (5m x 5m)
Block 1	Shingey Phu	107.56	81
Block 2	Humtsong	11.85	9

Bamboo Flowering	Sporadic	Gregarious	Last time of mass flowering:	None
-------------------------	----------	------------	------------------------------	------

	Sub-blocks	Has plantation potential	No potential	Not applicable
Plantation Potential	1			
	2			

Current management	Clearing of unwanted Bamboos for better regeneration.
---------------------------	---

Current threats	Threat	Description
	Fire	Since, the area is mostly vegetated with broad leaved species it is less prone to forest fire.
	Grazing	Area is located within vicinity of community and livestock are freely grazing without any restriction (relax herding).
	Illegal exploitation	Less of illegal activities since the group does regular monitoring.
	Over-exploitation	
	Other;	Mass death of bamboos may incur threats to the group.

Opportunities	Future opportunities for the entire block: The collection site is comparatively near the settlement and if they managed and sustainably harvest, the site has got huge commercial value. Other opportunities for the entire block include other NWFPs like Fern top, Damroo, Mushroom etc.
----------------------	---

2.3.3 Resources Assessment Design

Laid transect along the contour line with contour interval of 100 m and stratified random sampling along the contour line was used and survey point was then generated using GIS software. The sample plots of 5*5m were laid out along the transect line with interval of 50 m between sample plot. All the clumps of bamboos confined within the plot was then counted

and enumerated and data collected as per “**Form for bamboo Resource Assessment in the Field**”. Later the data is compiled in the compilation sheet for calculations to find Annual Harvesting Limit.

2.3.4 Bamboo Assessment Compilation Sheet

Table 04: Resource Assessment Compilation Sheet

Age Class	Number of culms	Sub-block 1 (Shingeyphu)		Sub-block 2 (Humtsong)		Total culms in block
		Culms	Clumps	Culms	Clumps	
< 1 year old bamboo culms	Total average culms counted in sample plots	38	334	138	55	
	Total average harvestable culms in sample plots	38	334	138	55	
	total in sub-block	20221	5807	1635	651	21856
	Total harvestable culms in sub block	20221		1635		21856
	AHL (25% Annual harvesting Limit)	5055		408		5463
1+year old bamboo culms	Total average culms counted in sample plots	309	334	138	55	
	Total average harvestable culms in sample plots	234	334	138	55	
	total in sub-block	124554	-	1635		126189
	Total harvestable culms in sub block	124554	-	1635		126189
	AHL (25% Annual harvesting Limit)	31138		408		31546
2+year old bamboo culms	Total average culms counted in sample plots	167	334	138	55

	Total harvestable culms in sub block	61201	-	1635		62836
	AHL (25% Annual harvesting Limit)	15300		408		15708
3+year old bamboo culms	Total average culms counted in sample plots	123	334	277	55	
	Total average harvestable culms in sample plots	72	334	277	55	
	total in sub-block	39935	-	3282		43217

	Total harvestable culms in sub block	39935	-	3282		43217
	AHL (25% Annual harvesting Limit)	9983		820		10803

Table 05: Block wise information (Summary)

Sub-Block No.	Name of Block	Product Type	Total culm	Annual harvestable (Culm)
Block 1	Shingey Phu	Bamboo (3 years and above)	39935	9983
		Tsar (3 years and below)	205976	51493
Block 2	Humtsong	Bamboo (3 years and above)	3280	820
		Tsar (3 years and below)	4905	1220

Table 06: Annual Forest Product Demand Assessment (Bamboo)

Sl. No	Products	Requirement for 1 year	No. of Household Required	Total Culms	Remarks
1	Bamboo (3 Years and above)	100	13	1300	For making bamboo mat only
2	Tsar (3 Years and below)	40	13	520	For making bamboo products
3	<i>Fargesia</i> spp (Arrow)	195	3	585	Only 3 HHs collect

Table 07: Annual Demand and AHL Comparison

Product type	Annual harvestable limit (Culm)	Annual Demand for Domestic use (Culm)	Difference (Surplus)	Remarks
Bamboo (3 years and above)	9983	1300	8683	
Tsar (3 years and below)	51493	2600	48893	
Arrow (<i>Fargesia</i> sp.)	820	195	625	

2.3.5 Sustainable prescriptions for sustainable NWFP harvesting

Table 08: Sustainable harvesting prescription for Bamboo

NWFP species	Harvesting prescriptions for sustainable harvesting
➤ <i>Borinda grossa</i>	Collection of bamboo should be done as per AHL reflected in the management plan and it should be within specified collection period.

	• Harvesting should be based on thinning bases and unwanted shoot within the clump should be cleared for better regeneration. • Should be carefully harvested without causing damages to young fragile shoots. • Should practice rotational harvesting method within the collection area.
➤ <i>Fargesia</i> spp.	• Collection limit should be bound by the AHL and collection should be done within specified time frame. • Collection should be based on thinning principle. • Should be carefully harvested without causing damages sprouting shoot. • Should practice rotational harvesting method within the collection area.

2.4 Daphne Management System

The density of the Daphne plant overall in the survey area is low as compared to past management plan. However, there are more plants of Class I and Class II which indicates more production in future. The declined in population is attributed to improper harvesting method and unsustainable collection of resources. Sometimes, the collectors do not follow the collection/ cutting guidelines such as thinning/ single tree selection method which lead to the rapid depletion of Daphne resource. Usually, Daphne bark is collected from April to June and the collectors knowingly or un-knowingly cut the plant from ground level to have more quantity as a result the plant cannot coppice or regenerate which ultimately leads to resource depletion.

There are two blocks identified in the whole area for collection of Daphne bark. The local people have traditional rights and access to the resources since time immemorial and they continue to manage the resource to generate group income and future generations. Both the blocks are nearby the village and it is main free grazing area of the village. Although the resource is not palatable to livestock but the young ones are trampled and damaged. The group will create awareness to the members in the house not to cut the plants un-necessarily. The harvesting has to be done as per the AHL and guidelines/ strategy in place.

2.4.1 Daphne Collection Area Description

Overall, the collection sites are around the village and it is cattle free grazing area. Although Daphne is non-palatable plant but often trampled as they walk. The slope of the area is mostly gentle and dominant species grown are *Alnus nepalensis* and *Rhododendron arboreum*. Collection of bark from the areas was done in past following single tree selection method.

2.4.2 Block description form for Daphne collection sites

Block Name: Rigney Tsomo and Lamwog Block

Table 09: Block description form

Access	Walking distance from the nearest village to the block?			
	Less than 3 hours	Within a day		More than a day
	Walking distance from the block to the block to the nearest round?			
	Less than 3 hours	Within a day		More than a day
Slope	Very steep >100%	Steep 70-100%	Moderate 45-70%	Gentle <45%
Forest description	Dominant: <i>Alnus nepalensis</i> , <i>Quercus semicarpifolia</i> , <i>Acer campbellii</i> , <i>Rhododendron arboreum</i> and <i>Symplocas</i> sp.			
Sub-block Name	Block No.	Productive area (%)		No. of plots
Rigney Tsomo	Block 3	31.6		24
Lamwog	Block 5	34.6		37
Current management	- Single tree selection for harvesting - Avoid un-necessary cuttings of plant - Monitor and protect from illegal collection			
Current threats	Threat	Description		
	Fire	Though it is within vicinity of community, the lack of ground fuel give advantage in fire control.		
	Grazing	Community depends partly on livestock and due to practice of relax herding of cattle, most area is vulnerable for threats from trampling of seedling and saplings by cattle.		
	Illegal exploitation			
	Over-exploitation	People cut trees from ground level for more production and moreover they do not follow single tree selection system for sustainable harvest.		
	Other			

Opportunities	Future opportunities for the entire block: The area is rich in other NWFPs such as fern top and mushroom.
----------------------	---

2.4.3 Resource Assessment Design

Laid transect along the contour line with contour interval of 100 m and stratified random sampling along the contour line was used and survey point was then generated using GIS software. The sample plots of 5*5m were laid out along the transect line with interval of 50 m between sample plot and Daphne plants were classified into five different class based on its girth size. Class I (1-4.9cm), Class II (5-9.9cm), Class III (10-14.9cm) Class IV (15-19.9cm) and Class V (20cm <).

The young plants below the height of 1 meter and girth <1cm are considered as seedlings. It was estimated that 50% of the total plants in the area are seedlings, which are healthy and appears vigorous in growth.

2.4.4 Daphne Assessment Compilation Sheets

Table 10: Resources Assessment Compilation (Daphne) –Rigney Tsomo & Lamwog Block

Girth Class	Numbers of Plants in sample plots	Average Yield of Wet Bark (Kg)	Average Yield of Dry Bark (Kg)	No. of plants in the Block	Average bark yield (Wet) in Block (Kgs)	Average bark yield (Dry) in Block (Kgs)	Total Harvestable in the Block (Kg)
Class III	54	1.6	0.9	23412.43	697.42	390.21	390.22
Class IV	37	2.8	1.4	16042.03	1214.38	606.96	607.00
Class V	24	2.2	1	10405.74	953.74	435.55	433.57
Total Average Yield (Kgs)				49860.2	2865.54	1432.72	1430.79

Table 10: Annual Harvesting Limit (AHL) –Wet and Dry form

Girth Class	Plants in Blocks (Nos)	Average bark yield (Wet) (Kgs)	Average bark yield (Dry) (Kgs)	AHL (Wet Bark) (Kgs)	AHL (Dry) (Kgs)
Class III	23412.43	697.42	390.21	139.48	78.04
Class IV	16042.03	1214.38	606.96	242.88	121.37

Class V	10405.74	953.74	435.55	190.75	87.11
Total AHL				573.11	286.52

There is no demand for group members and group can sell all the harvested quantities to outside to generate income for the group.

Table 11: Sustainable harvesting method for Daphne

NWFP species	Harvesting prescriptions for sustainable harvesting
➤ <i>Daphne</i>	• Daphne should be harvested only after maturation so to increase its production. • The collection shall be done from the 3rd to 8th month of Bhutanese calendar. • Left some part of stump for coppicing and better regeneration. • Harvest should be done as per AHL and on thinning basis for sustainable resource management. • Group should practice rotational harvesting method within collection area for sustainable resource management.

2.5 Satuwa (*Paris polyphylla*) Management System

Paris polyphylla is known as Thoksampa in sharchop and as Satuwa in Lhotshampa. Satuwa is also known the trade name used in the region and for this reason the name Satuwa is used in guidelines also. Satuwa belongs to the family of Melanthiaceae. At present, there are 7 different varieties of Satuwa recognized by the world Checklist of Selected Plant Families, while flora of China recognizes five additional varieties. It is rhizomatous perennial plant, which can reach about one meter in height. It has spider-like flowers with long, thread-like, yellowish green petals, which are followed by small, scarlet barriers in autumn. Satuwa grows best in the broadleaved forests with bamboo thickets, grassy or rocky slopes and stream sides at altitudes from 100 m up to 3500 masl. It can grow full or semi-shade but requires moist soil. Each year, plants parts above ground die off and regenerates in spring, flowers in April/May and die-off in October/November. In November new buds are being formed from the rhizome, which remain dormant underground until next germination period.

In Cheng, commercial interest in Satuwa started a few years ago with traders exploring marketing opportunities because of growing market demands and increasing prizes in export markets. Due to limited information and knowledge on its management and collection procedure, people of Cheng is resorted to those unsustainable harvesting practices where entire rhizomes being uprooted before seeding could occur, and also no part of the rhizomes was replanted to allow further regeneration. In a few years, Satuwa resources have been severely declined. It is of utmost importance to reverse this trend and put sustainable management practices in place. So, the NWFP is revised and in the current plan period the group will protect illegal collection in off season by others and also avoid collection of immature rhizomes.

In designated Cheng NWFP collection area, Satuwa is found more in about three blocks viz, Rigney Tsomo (Block 3), Ngashi (Block 4) and Lamwog (Block 5).

2.5.1 Overall site information

The collection areas (blocks) are located very closer to the settlement and in the growing areas the main vegetation type is Cool Broadleaved Forest with *Symplocus* sp., *viburnum erubescens* and *Quercus semicarpifolia* etc. as dominant species. Grazing of cattle is main threat to the plant.

2.5.2 Block description form for Satuwa (*Paris polyphylla*)

Block name: Rigney Tsomo (Block 3), Ngashi (Block 4) and Lamwog (Block 5)

Table 12: Block description form

Access	Walking distance from the nearest village to the block?			
	Less than 3 hours	Within a day	More than a day	
	Walking distance from the block to the block to the nearest round?			
	Less than 3 hours	Within a day	More than a day	
Slope	Very steep >100%	Steep 70-100%	Moderate 45-70%	Gentle <45%
Forest description	Dominant and associate species: <i>Quercus semicarpifolia</i> , <i>Symplocas</i> sp., <i>Acer campbellii</i> Associated species: <i>Eurya cerasifolia</i> , <i>Vibernum erubescens</i> , <i>Smilex rigida</i> , <i>Daphne</i> and <i>Borinda grossa</i> .			

Current management	Current management practices in entire block: They leave some plants for future regeneration through seeding. Harvest rootstocks of only mature Thoksampa.
---------------------------	--

Current threats	Threat	Description
	Fire	Less susceptible to forest fire since the area do have less fuel concentration and moreover, the area is vegetated with broad leaved species
	Grazing	Community freely let cattle at the site and threats from grazing and trampling is high.
	Illegal exploitation	Minimal threats due to disruption in markets outlet due to pandemic.
	Over-exploitation	
	Other	

Opportunities	Future opportunities for the entire block: Presence of NWFP such as Mushroom and Fern top adds economic value to the group.
----------------------	---

2.5.3 Satuwa (*Paris polyphylla*) Assessment design

The transect line was laid along the contour line with contour interval of 100 m between two transect. Transect-line sampling method was most suitable for survey since such species are in general scarce and sparsely distributed over the area. The sample plots of 4 m wide were laid out along the transect line viz. 2 m above and 2 m below the transect line. The *Paris polyphylla* present within the given area was then enumerated.

2.5.4 Satuwa (*Paris polyphylla*) compilation sheet

Table 13: Resources Assessment Compilation for Satuwa

Total no of Satuwa plants	Collection area size = a; Sampling area covered = b)			
	Number of Satuwa plants in sampling area (c)	Number of Satuwa plants per hectare (d) (=c/b)	AHL of Satuwa rootstocks in numbers (e) (=a*d)	AHL of Satuwa per kg (f) (=e/average age of rhizomes/kg)
Total no of plants >2.5 feet and >25 fruits	0	0	0	0
Total no of plants >2.5 feet	4	1.9	131.3	2.14

Total no of plants 1-2 feet	10	4.8	331.8	2.8
Total no of plants < 1 feet	132	63.7	4404.2	17.6
Total	146	70.4	4867.3	22.54

The survey area contains good numbers of Satuwa which was further categorized under different height and fruit classes. The plant which has attended the height more than 2.5 ft. can be harvested in a year and the species having height range between 1- 2.5 ft., and 0-1 ft. will be harvestable in following year, 3rd year and 4th year respectively. For first year, 2.14 kg of *Paris polyphylla* can be harvested from the area by the CNWFPMG, which would be generating income around Nu.8560 and for second year, they would be able generate amount equivalent to Nu.11200 through the sale of 2.8 kg. By the end of 4th and 5th year, the group can be able to harvest the remaining *Paris polyphylla* whose heights are presently less than 1 ft. and can able to generate income amounting to Nu.68000 given no fluctuation in rate as prevails.

2.5.5 Harvesting prescriptions for sustainable harvesting of Satuwa

Table 14: Harvesting prescription for Satuwa

NWFP species	Harvesting prescriptions for sustainable harvesting
➤ <i>Paris polyphylla</i>	- Thoksampa (<i>Paris polyphylla</i>) should be harvested in 6th 7th and 8th month of the Bhutanese Calendar, according to maturity of seed for generation - Harvest rootstocks of only mature Thoksampa - Harvest rootstocks after seed dispersal (mostly in November but timing depends on the altitude/ season). - Plant a part of the rootstock with the roots and the <i>upcoming</i> sprout back into the soil- this part can grow into a new plant.

2.6 Other Minor Products Management

The NWFP area is also very rich in other minor forest products which can be collected for consumption and even sold to generate income such as Fern top ‘Nakey’, Mushroom and Damroo (*Elatostema* sp.). As of now the group haven’t marketed these products and it was mostly collected by others for self-consumption and marketing. The management group during the consultation unanimously decided to explore opportunities and plan to market. The group also discussed on the supply of other products such as stones from their area. However, any extraction of such resources shall be accrued out as per the Forest and Nature Conservation Rules and Regulations in place

Table 15: Potential area for Mushroom, Fern and Damroo

Sl. No	NWFP types	Site location	Annual harvesting Limit
1	Mushroom	Pamdung top, Gayphug wok, Rigneytshomo Manirong and Dongbutang area.	10 Kg
2	Fern	Kraileng, Gayphug juk, Pamdung juk, Kong Manidangray and Singserlodur area.	100 bundles
3	Damroo (<i>Elatostema</i> spp.)	Pamdung top and Lamwog block	40 bundles

2.7 Marketing Guideline of NWFPs

- The NWFPMG shall carry out NWFP harvesting activity in the appropriate season as prescribed in the management plan.
- The marketing of the NWFP shall be done in accordance with the regulatory framework issued by the DoFPS and with assistance from the appropriate agency.
- For any species/product without harvesting guidelines, an approval for marketing shall be asked from DoFPS.
- The NWFPMG or any member of the NWFPMG shall obtain transit permit for movement of NWFP for commercial purposes from the Range Office.
- The marketing of produce from NWFPMG shall be facilitated by group committee members.

2.8 Group Annual Financial Projection

Table 16: Annual Group Financial Projection through sales of different NWFP

Types of products	Annual DD of Members	Surplus to be marketed	Unit	Members collection permit fees	Outsiders rate	Amount (A)	Amount (B)	Total Amount (A+B)
Bamboo (Matured)	1300	8683	Piece	1	1.5	1300	13024.5	14324.5
Bamboo (Immature) –Tsar	2600	48893	Piece	1.5	2	3900	97786	101686
Aurr (Arrow)	97	312	pairs	0	50	0	7800	7800
Daphne bark (Dry)		286.52	Kgs	0	65	0	18623.8	18623.8
Satuwa (Dry)		22.45	Kgs	0	4000	0	89800	89800
Ferns (Nakey)		100	Bdl	0	5	0	500	500
Damroo (<i>Elatostema</i> spp.)		40	Bdl	0	5	0	200	200
Annual Projected Income (Nu.)								224933

2.9 Marketing arrangements

Marketing will be organized by the three executive members and the find the market value of the produce. The compensation for the coordinator of the marketing and transportation will be borne from the sale of the produce. Each person from the household will go for the harvesting of the *Paris polyphylla* and the marketing of the produce will be also done in group and the income generated will be shared equally. The marketing will be organized by the executive members and reimbursement of the income will be borne by all members equally.

2.10 Benefits to the members

The cost of the produce would be paid to the members according to the amount they contribute to the group after deducting the royalty of 10% of the total sale and contribution to community development fund.

Table 17: Financial projection of benefits to the members from NWFP sales

Sl. No	Particulars	Products (Names)			Total amount (Nu.)
		Bamboo (Aurr)	Daphne	Satuwa	
1	Revenues				
A	Total quantity (unit)	409 Pairs	286.52 Kg	22.45 Kg	-
B	Market price (Nu per unit)	50	65	4000	-
C	Total revenues from forest product sales (a*b)	20450	18623	89800	Nu. 128873/-
A	Total revenues				Nu. 128873/-
2	Expenses				
A	Packaging materials	Nil	Nil	Nil	
2	Expenses				
A	Packaging materials	Nil	Nil	Nil	
B	Royalty				5 % of total collection=6445/-
C	Transportation costs				Nu. 1600/-
D	Compensation fee to executive committee for marketing products				Nu. 1000/- per event
E	Incidental expenses				0
B	Total expenses				Nu. 9045/-
C	Total benefit (net-income) of group members (Total revenues A – Total				Nu. 119828/-

	expenses B)				
D	Average income to group members (C/ no of group members)				Nu. 9217.53/-

2.11 Benefits to the group

The formation of the Cheng NWFP management group aims to benefit the group members and to alleviate the poverty upon sustainably managing the natural resources. The following table shows financial projection of group exclusive of revenue generated from domestic supply.

Table 18: Financial projection of benefits to the group, the community development fund

Sl. No	Particulars	Amount (Nu)
	Revenues	
1	Membership fees	
2	Contribution to the community development fund (CDF) from sales of the product 1	20450/-
3	Contribution to the CDF from sales of product 2	18623/-
4	Contribution to the CDF from sales of product 3	89800/-
	...	
A	Total revenues	Nu. 128873/-
	Expenses (only include expenses that will be paid from the group funds)	78873/-(expenses including loan, community infrastructure development and working expenses)
	...	
	...	
B	Total expenses	78873/-
C	Balance: Total revenues-total expenses	50000/-

2.12 Annual Activity Work Plan

Table 19: Annual Activity Work Plan

Activity	Activity Timeframe				
	Year – 1	Year - 2	Year - 3	Year – 4	Year – 5
Collection of Bamboos (Matured and Immature)	Application, Approval and Permit Issue		- October month		
	Collection of Bamboos		- November-March		
Collection of Daphne bark					
Cleaning and Improvement works (Plantation, Thinning etc.)	Cleaning in Humtshong		Cleaning and Improvement		Cleaning in Shingeyphug
Carry out waste cleaning campaign and awareness	As per the Plan of Bumdeling Geog Waste SOP. Cleaning Once in 2 months				
Meetings	General Meeting – Twice a year (May and October) Committee meetings - As and when required				
Annual Progress Report Submission	November month				
Annual Monitoring and Evaluation	December month				

PART II. BY-LAWS

1. Membership Arrangements

- a. All registered households of Cheng village in Bumdeling geog will form the group and join as members except those NOT willing to join.

Joining member should;

- Have attained 18 years old and above, representing a household from NWFP area.
 - Be either Male or Female
 - Membership approved by office bearers and village representatives
 - Since the Group is revision, Membership fee may not be paid.
- b. Any new households wishing to join the NWFPMG after the certification of the NWFP must pay the amount specified by the committee members as compensation and fee. The compensation and fee includes, share of total saving at the time of joining, Annual member fee till date and works/ activity absent fees till date). Thereafter, the new joining member will abide by this by-laws share the benefits.
- c. Any member wishing to withdraw from the NWFPMG can do so upon approval of the committee member but they shall forfeit all claims over the NWFPMG funds and resources from that time. Further, the member resigning without any valid reason will be not be issued permit from group and if allotted from Range the collection should be outside NWFP Area.
- d. Any members having to withdraw from the NWFPMG for reasons deemed to be unavoidable and genuinely unfortunate by the committee members can do so with share of benefits accumulated at till that date.

2. Management Committee Formation and responsibilities

As decided by the NWFPMG Members, there will be at least 3 committee members for Cheng NWFP as;

<i>Name</i>	<i>Contact No.</i>	<i>Committee member</i>	<i>Tenure of the committee</i>
Leki Tshering	(11601002303) 17324483	Chairman	

Singye Dorji	(11601001648) 17360541	Secretary	5 years
Choki Dorji	(11601001596) 17991675	Treasurer	

Members of the NWFP management & marketing group	Village	Number of member households	Geog
	Cheng	13	Bumdeling
	Responsibilities and rights of members: • Should monitor the area and inform the committee member if any illegal activities be found. • Follow the harvesting prescription during the harvesting season. • Patrolling of the resources area during the season		

Executive committee	
Chairperson	Name of Chairperson: Leki Tshering • Heads the NWFPMG. • Calls meetings whenever necessary and informs concerned persons about date, time and place and the reasons for the meeting. • Chairs and facilitates meetings and makes sure each person is allowed to speak, thereby giving everyone a fair chance to speak and raise issues • Approves applications for forest products (with Secretary). • Countersigns financial transaction and authorization to draw cash from the bank account (with Treasurer). • Organize field visit for checking and patrolling • Resolve disputes and conflicts among members • Maintain contacts with traders and to arrange and coordinate marketing of NWFPs.

Secretary	Name of Secretary: Singye Dorji
-----------	---------------------------------

	Responsibilities of secretary: • Assists the Chairperson and officiate him/her during his/her absence. • Manages the correspondence (writing of letters and minutes of meetings) for the NWFPMG. • Maintain the files of the NWFPMG. • Maintains the list of NWFPMG members. • Approves applications for forest products (with Chairperson). • Keeps minutes of NWFPMG meetings. • Prepares Annual Progress Report (with other NWFP Management Committee members). • Hospitality and visitor management • Passing information and calling members as and when required through phone call or correspondence. • Countersigns financial transaction and authorization to draw cash from the bank account (with Treasurer and Chairperson).
--	--

Treasurer	Name of Treasurer: Choki Dorji
	Responsibilities of Treasurer: • Looks after any financial transactions on behalf of the NWFPMG. • Keeps records of expenditure and labor contribution during NWFP activities • Gives a detailed account of how much money or labor has been contributed, how much has been spent and how much is still left, at every NWFPMG meeting (or as required) • Prepares the Annual Financial Report for the NWFP (with the assistance of other NWFP Management Committee members). • Countersigns financial transaction and authorization to draw cash from the bank account (with Chairperson and Secretary). • Assist Secretary and Chairperson in management and coordinating meetings and activities.

NWFPMG members	Roles and Responsibility of NWFPMG: • Be responsible for sustainable management of the NWFP Management Unit, in accordance with the approved management plan and by-laws; • Ensure that no person collect, use, remove, damage, or destroy any forest produce from the NWFP Management Unit without authorization. • Participation in NWFPMG planning and decision-making. • Election of NWFP Management Committee members. • Participation in NWFPMG meetings. • Co-operation with the NWFP Management Committee in carrying forest management and other management operations especially by contributing labor if required. • Co-operation with the NWFP Management Committee in regulating forest use by other NWFPMG members and by outsiders • Become involved in other NWFPMG activities as planned
Membership fee and purpose	A sum of Nu. 500/-would be levied for all the members as membership fee for those who would join as new member and the fund accumulated will be deposited in the group account. It is not applicable for old members.
Forest product collection permit fees	For harvesting and collection of forest produce from NWFP area, collection permit shall be issued to all the eligible NWFPMG at rate fixed by the NWFPMG in line to Forest and Nature Conservation Act and Rules in place. Since the permit fees are revenue for the group fund, permit shall not be issued on credit at any cost to NWFPMG Members and outsiders. The amount specified for all type of forest products in annexure I shall be deposited in group account within a month from date of permit issue.

Sale of services (ecotourism and ecosystem services)	Ecosystem Services includes water for community benefits in terms of drinking, irrigation, Bird and Butterfly watching, nature trekking, etc. For such services, minimal fees will be charged in consultation with relevant agencies and offices. Such collection will also be deposited in group account.
---	--

Interest returns	It is basically the interest on loans given to members and outsiders after accumulating sufficient fund in group.
-------------------------	---

NWFPMG Fund Management and Benefit Sharing Mechanism	Cheng NWFP fund shall be utilized either in group or by the individual members. Management of NWFPMG fund is mainly the responsibility of the NWFP Management Committee. The Treasurer shall maintain all transaction records. Since all NWFPMG members contribute to the fund they have the right to know how much money is generated and how it is being used. Therefore, the NWFP Management Committee especially the Treasurer needs to keep NWFPMG members informed about the fund status during NWFPMG and Committee and general meetings.
---	--

Fund utilization	• The NWFPMG decided to give loans to members at 5% interest after maintaining bank balance of Nu. 50000.00 (Fifty Thousand) only at Bank all the time. • The group can support and give donations from group account after taking decision by 3/4th of the group members. • Support the needy families in of the member in difficult times. The amount to be given can be decided by Committee. Short term free interest loan for 1-2 months can also be sanctioned on need basis after thorough scrutiny by the community.
-------------------------	---

Others suggested NWFP Fund Utilization Areas	• NWFP development activities (NWFP review, nursery creation, plantation, thinning, cleaning, salvage operation, sanitation, boundary demarcation, fire line creation, etc.). From the accumulated funds, the NWFPMG can allocate and spent for mentioned activities mainly to buy equipment and seeds and seedlings. • If the activities exceeds one day the executive committee member or other member who is going for the purpose of meeting, training, marketing for the group he or she will be paid Nu 400/- as daily allowance. It should be claimed properly as soon and the member is back to station. • The committee members have to coordinate various activities for group and mostly they have to make a call which incurs expenditure, the group decided to give voucher allowance of Nu. 100/year to the Chairman and Secretary.
Fund disbursement procedure	• The Treasurer shall maintain all detail expenditure records (receipts, vouchers, bills, including minutes of meetings, etc.). All such expenses shall be immediately recorded in the cash book. • The Treasurer shall present the details of expenditure to the NWFPMG members and concerned inspection team(s). • The concerned Chief Forestry Officer/ Range Officer shall ensure the compliance of above provisions. • Any expenditure up to Nu.10000.00 shall be decided by the NWFP Management Committee and beyond that amount the decision shall be made by the 2/3rd majority of the NWFPMG members including Committee members.

Conflict Management and resolution	In case dispute or conflict among communities arises about access to certain areas for NWFP harvesting; the matter shall be put to the Geog Tshogchung (GT) Dzongkhag Tshogdue (DT) for further decision. Conflicts or dispute within the NWFP Management Group, which cannot be resolved by the group members, shall be forwarded to the Coordinator for settlement. If the case cannot be resolved, it shall be forwarded to the geog Administration In case there is a conflict between the NWFP Group and outsiders, the case shall be forwarded to the Dungzam Range Office and Geog Administration by the Coordinator.
---	---

Offence and Penalties	• Absentee fee from meeting/ training Nu. 300/ day/ occasion • Absentee fee from ant type of work Nu. 600/ day/ occasion. • Fines for late and absentee from meetings and work. After fixing date of meeting and working in NWFP, any member failing to come will have to pay Nu. 300/Day and Nu.600/Day respectively as absentee fee. For those who come late Nu. 50 will be imposed as late comer fee till 15 minutes from fixed time. If the report after 15 minutes from fixed time, it shall be considered absent and liable to pay absentee fee. • If any members found not obeying to committee members for the work mentioned in the plan, he or she shall be liable to pay penalties which is double the amount for that particular activities. • Collection or harvesting of any forest products without approval and collection permit under Forest and Nature Conservation Rules and Regulation in place or Management Plan approved by the Department of Forests and Park Services under the Act is offence and violation of this rule shall be
------------------------------	--

	liable for fine and compensation as follow:
--	---

Table 20: Schedule of Fines and Penalty

Types of Offence	Fines and compensation	
	Fines	Compensation
Collection of matured bamboos from Management Area without collection permit	Nu.5 per piece	Compensation at fair market value decided by NWFMG or Confiscate
Collection of immature bamboos (Tsar) from Management Area without collection permit	Nu. 10 per piece	Compensation at fair market value decided by NWFMG or Confiscate
Collection of Satuwa (<i>Paris polyphylla</i>) from Management Area without collection permit/ in wrong season	Nu. 1500/Kg	Compensation at fair market value decided by NWFMG or Confiscate
Collection of <i>Frageria</i> spp. (Arrow) from Management Area without collection permit	Nu. 50/pair	Compensation at fair market value decided by NWFMG or Confiscate
Collection of Daphne bark from Management Area without collection permit	Nu. 60/ Kg in dry	Compensation at fair market value decided by NWFMG or Confiscate
Collection of Nakey and Damroo	Nu. 10/Bdl	NA
Collection of Mushroom without collection permit	Nu. 150/Kg	Compensation at fair market value decided by NWFMG or Confiscate

3. Meetings:

3.1. NWFPMG General Meeting/ Assembly

The general meeting shall be conducted twice a year; one meeting shall be held in the mid of 6th month of Bhutanese calendar and another in the mid of 11th month. The meeting will be chaired by Chairman and Secretary in absence of Chairperson. The committee members will present activity progress report and financial status of NWFP to the NWFPMG and issues related to NWFP activities, progress and problems should be discussed. The committee members should send the minutes of meeting to Dungzam Park Range. If possible, the NWFPMG will invite representative from nearest Dungzam Park Range as observer.

3.2. NWFPMG Committee Meeting

This meeting will be conducted as and when required. The probable agenda for the meeting shall conflict resolution, financial transaction, sell of timber and revision of By-laws.

4. Amendment of NWFP Management Plan and by-laws

The Cheng NWFP Management Plan and By-Laws is reviewed and revised based on the findings of monitoring and evaluation report of the previous plan and interest of the management group. The amendment will depend on the current management of the forest by the NWFPMG Members. Usually, the revision and amendment should be carried in the second last year of NWFP Management Plan Period (i.e. 4th year).

However, if the group is not in the position to manage the resources as per the guideline and willing to cancel the “NWFP Management certificate”, it can be done. Basically certificate shall be cancelled:

- If the performance of NWFPMG is not as per prescriptions of the approved management plan or the sustainability of the resource is not ensured.
- In the event the members of the NWFPMG decide to cancel NWFP Management certificate in accordance with this Rules, the NWFP Management Certificate shall be deemed canceled on the date of such decision being notified to CFO in writing and the NWFPMG shall surrender the Certificate to the Department.
- The CFO shall have the right to enquire about the reason for such cancellation to ensure that no offence has been committed and shall notify the NWFPMG on the cancellation of the certificate

5. Powers of the Department

As per Chapter III of the Forest and nature Conservation Rules and Regulation, 2017, the Department of Forests and Park Services is fully empowered to take action with regard to both forestry and other developmental activities in part or whole of the Community Forest.

In addition, the department has the authority and shall;

- Suo moto or on the request by the NWFPMG take action against violator of the Act, Rules or Management Plan;
- Inspect, monitor, review the records of and otherwise supervise the activity of the NWFPMG; and
- Take action including cancellation of the NWFPMG certificate, if the NWFPMG or any of its members who violate the provision of the Management Plan or any provision under the relevant chapters in FNCRR, 2017 and amendment thereafter.

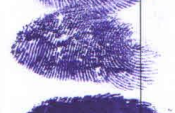

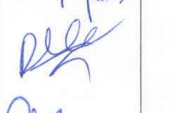

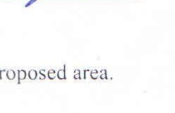

6. Annexure 01: Permit fees and Royalty Charges

Table 21: Collection of permit fees and Royalty

Products	Quantity	Unit	NWFPMG		Outsider	
			Rate		Rate	Mat cost
Bamboo (Mat)	1	Pcs	1		1.5	400
Tsar	1	Pcs	1.5		2	
<i>Paris polyphylla</i> (Thoksumpa)	1	Kg			As per	prevailing rate
Arrow (Aurr)	1	Pairs	Free		50	
Daphne	1	Kg			65	
Fern Top	1	Bundle			5	
Damroo	1	Bundle			5	
- No Royalty shall be levied for domestic consumption. - Royalty as per the schedule of royalty and fee prescribed in FNCRR shall be levied for collection of raw material for cottage industry and for trade.
