Introduction

The non-wood forest product plays a vital role for well-being of people living in rural communities and it can be a major source of income. Phangyul gewog is one of the smallest gewogs located 16 km away from Bajo town towards the north, under Wangdue Phodrang Dzongkhag and has water shortages. In this regard, people of Phangyul gewog (Phangyul, Kumchi and Goenkha village) have tough times with paddy cultivation. Therefore, they must depend on NWFPs for income generation.

Therefore, the Non- wood forest products can be considered as one of the most important elements for livelihood improvement. The community members of Phangyul have also expressed their interest in the development of amla related products in the future such as candy and pickle. With the help of this management plan, the members of this group hope for long term benefits as well as immediate income generation and resource protection.

Goal and Objectives

1. Sustainable management of NWFPs
2. Income generation through sale of NWFPs
3. Protection of natural resources from outsider.
