NOTESHEET

Subject: Approval of NWFP Management Plans

The Non-Wood Forest Products are an important source of livelihood for many rural communities in the country. In order to ensure the sustainable management of resources in the wild, management responsibilities are handed over to the communities through the formation of Non-wood Forest Product Management and Marketing Group. Further, it is mandatory for the group to prepare a resource management and marketing plan and submit it for approval through the Chief Forestry Officer of that area. As such the Forest Resource Planning and Management Division had received and reviewed the following plans submitted and hereby submitted to seek approval:

1. Yumzang Semthuen NWFP Management & Marketing Group, Sakteng Gewog, Tashigang
2. Gangri Phuensum Ngomoen Tshogpa, Naro Gewog, Thimphu
3. Lauri Gaki Shingmein Thuenkyed Tshogpa, Lauri Gewog, Samdrup Jongkhar
4. Momring Shingmein Thuenkyed Tshogpa, Lauri Gewog, Samdrup Jongkhar
5. Thekcho Choling Goenpa Shingmein Tshogpa, Lauri Gewog, Samdrup Jongkhar
6. Woonthi Shingmein Natshok Thundrel Tshogpa, Lauri Gewog, Samdrup Jongkhar
7. Zangthi-Tshothang Shingmein Thuenkyed Tshogpa, Lauri Gewog, Samdrup Jongkhar
8. Patpanadang Shingmein Dondrup Tshogpa, Lauri Gewog, Samdrup Jongkhar

As per the Forest and Nature Conservation Act of Bhutan, 1995, such plans are required to be approved by the head of the Ministry. Submitted for kind approval.

Submitted by:

(Sonam Tobgay)

1. Background

Zangthi and Tshothang villages fall under the gewog administration of Lauri, under Jomotsangkha Drungkhag. The altitude of Zangthi village is 1646 m and Tshothang at 2034 m above the sea level. Agriculture is the primary source of livelihood in village. People cultivate maize, buckwheat, millet, potatoes, and mustard. Maize is the staple crop of the village. Farmers also grow different green vegetables, including green chillies, cabbage, spinach, broccoli, etc. Cereal crops are also grown.

The Zangthi-Tshothang Shingmein Thuenkyed Tshogpa is formed with One hundred and thirty-one (131) members from these village have actively registered for Non-Wood Forest Product (NWFP) group revision.

Some of the various NWFPs, including *Rubia cordifolia*, *Pouzolzia spp*, *Paris polyphylla*, *Viscum nepalense*, *Swertia chirayita*, mushroom, fern, *Elatostema lineolatum*, *Illicium griffithii*, *Plectocomia himalayana*, *Girardinia diversifolia*, *Daphne bolua*, etc., are found from the forest located in their locality.

There are 21 blocks of NWFP collection sites. The total area of NWFP block is 4683.118 hectares, equivalent to 11572.236 acres of State Reserved Forest (SRF). The collection areas fall under their right of traditional boundary.

Review of the past management plan

The NWFP group members have been greatly benefited through the group formation. The right for collection and trading of NWFPs have supported their household income for meeting various expenditures at home, including the education of their children at school. The farm road connectivity in the village has further created a conducive environment for trading of NWFPs harvested. Prior to group formation, the livelihood and household income of people in the village was not stable economically. The group was established in 2011 and revised once in 2015.

The NWFP group members have sold 22763 kilograms of *Rubia cordifolia* since the 1st revision, earning sum total of Nu.2401796. They have also sold 915 kilograms of *Swertia chirayita*, earning Nu.52900/ and 450 kilograms of *Pouzolzia sanguinea* earning a total of Nu.20250/. The total saving of the group in the bank is Nu.20,2092. The group savings of the NWFP members were not utilized for community contribution so far. However, group members are willing to support important community activities if required. The provisions for loan to NWFP members have been kept for solving the problems and urgent needs of money for NWFP members.

The validity of the present plan has expired. The group members would be restricted for collection and trading of NWFPs whereby their income generation and livelihood of group members would be affected. Thus, the revision of the group is important and

mandatory. The timeframe for the NWFP Management & Marketing plan is for a period of maximum 5 years. Hence, revision of the Zangthi-Tshothang Shingmein Thuenkyed Tshogpa has been initiated.

2. Objectives:

1. Sustainable collection of NWFPs
2. Income generation for members through the sale of NWFPs
3. Conservation of NWFPs

3. Description of NWFPs

Table 1. Brief description on commercial harvesting of NWFPs

<i>NWFP name</i>	<i>Harvesting area(s) (name)</i>	<i>Parts harvested</i>	<i>Use purpose (traditional & others)</i>	<i>Harvesting season (months)</i>	<i>Estimated quantity that can be collected</i>

<i>Illicium griffithii</i> (Khaila chinang/Lishi-Sh)	Taktakpadongnagpo-chubab Gorphu-Sawangshingma Gorphubamdung Gorphutotkabrangsa Wampangri, Chumojuk Rizawang Gungsangthenbo	Fruits/Se edpods	Medicine	October to December (or when fruits are matured)	500 kgs
<i>Juglans regia</i> (Kheshing-Sh)	Tshothang Tsanglari -Tsankhang	fruits	edible	September to October	300 kgs
<i>Gultheria fragrantissima</i> (Sakchongma-Sh)	Tshothang Tsanglari -Tsankhang	Leaves and twigs	Essential oil	June to September	400 kgs

4. Harvesting prescriptions for sustainable NWFP harvesting

The harvesting prescriptions and basic guidelines are prepared in reference to the framework for management and marketing of NWFPs and guidelines developed for *Daphne*, *Illicium griffithii*, *Chirata*, *Rubia*, etc. Following the management prescription and harvesting guidelines, the NWFP members harvest NWFPs from the designated collection sites. The following are some of the important points to be followed by every member as provided in tablet below:

Table 2. Basic guidelines and prescriptions for sustainable harvesting of NWFPs

NWFP species	Harvesting prescriptions for sustainable harvesting
<i>Rubia cordifolia</i> (La-nyi-roo-Sh)	1. Use sharp knife for harvesting of the upper part of the plant. 2. Cut the plant at 5cm above the ground level. 3. Leave at least 10% of the plants without harvesting 4. Do not collect roots 5. Do not uproot entire plants. For the collection of Rubia, the identified collection sites should be divided into three areas for rotational harvesting of the species. Each season, the species shall be collected from one area and move to the next area in the next harvesting season and that way the species will get ample time for its regeneration and sustainable harvesting (<i>Rubia</i> takes three years for regeneration).
<i>Pouzolzia sanguinea</i> (Yongjiba -Sh)	1. Cut the plant at 10 cm above the ground level. 2. Do not damage the remaining young stands/seedlings/saplings 3. Felling of surrounding trees to ease the harvesting is prohibited 4. Leave at least 10% of the plants to allow natural regeneration 5. Harvesting of roots is strictly prohibited for ecological reason
<i>Elatosteme lineolatum</i> (Drimom-Sh)	1. Collect plants that are 15cm and above 2. Retain stumps of around 3” for sprouting of new shoots 3. Do not uproot entire plants. 4. Shouldn’t cut down trees and create more opening 5. Shouldn’t disturb its catchment area
<i>Plectocomia himalayana</i> (Phashi -Sh)	1. Cut the cane stem only when mature 2. Pull down as much of the stem as possible 3. For shoots, cut young shoot by bending the cane stem with a long and strong stick with a hook 4. Do not cut the entire cane to collect shoots. Cut the leading shoot with the help of sharp knife diagonally 5. Care shall be taken to avoid damaging sucker buds
Mushroom (Bamung)	1. Do not use knife for harvesting mushrooms 2. Do not scratch or disturb the logs/soil while harvesting 3. Use bamboo baskets rather than plastic bags for collection and transportation of mushrooms.
<i>Diplazium esculentum</i> (Dhawai -Sh)	1. Harvest young shoots that are 15cm length 2. Do not harvest the entire shoot coming up in season 3. Retain at least 50% of young shoot of last flush for the development of leaves 4. Don’t harvest the shoots that have developed to leaves 5. Do not cut down trees which provide shade to the plants

<i>Viscum nepalense</i> (Nya-shing-jorma-Sh)	1. Do not cut or fell the host trees to ease collection 2. Do not collect the whole bunch, leave at least 25% for flowering and fruiting
<i>Girardina diversifolia</i> (Zangroo-Sh)	1. Peel out fiber after cutting plant from base. 2. Harvest plant only after seed dispersal. 3. Do not collect all plants from one area
<i>Swertia chirayita</i> (Khalu-Sh)	1. Collect the plant only after seed dispersal commenced. 2. Do not collect the plants late in the season (February) as there are high risk of damaging the germination of new seedlings
<i>Daphne bolua</i> (Shogushing-Sh)	1. Cut the plant at 10 cm above the ground level (the left stump will regenerate in the following growing season). 2. Cut only stems that are more than 3 cm in diameter. 3. Do not damage the remaining young stands, seedling and /or saplings 4. Do not fell the surrounding trees in order to clear the area to ease harvesting Divide harvesting area into 5 blocks for Daphne. Harvesting is rotated over the 5 blocks so that harvesting takes place only in one block per year (Daphne takes 5 years to produce stems of more than 3 cm in diameter).
<i>Paris polyphylla</i> (Thoksampa-Sh)	1. Do not harvest the plant before the seed dispersal 2. Harvest only after bud emerges from the rhizome which remain dormant underground 3. Leave some portion of the rhizome with bud underground while harvesting the rhizome of the plant.
<i>Chimonobambusa calosa</i> (Rasu-Sh)	1. Cut culm above first internode from the base. 2. Leave bamboo shoot or culm of less than one year old intact. 3. Cut at maximum 33% of the 1+ year and 2+ year old culm per clump. 4. Do not cut culm when new shoots are sprouting.
<i>Borinda grossa</i> (Shi -Sh)	1. Cut culm above first internode from the base. 2. Leave bamboo shoot or culm of less than one year old intact. 3. Cut at maximum 33% of the 1+ year and 2+ year old culm per clump. 4. Do not cut culm when new shoots are sprouting.
<i>Illicium griffithii</i> (Khaila chinang/Lishi -Sh)	1. Hand pick fruits only when fallen on the ground, or 2. Use long bamboo poles to shake off fruits from the trees. 3. Don't cut tree or branches to collect fruits.
<i>Juglans regia</i> (Kheshingh-Sh)	1. Hand pick fruits only when fallen on the ground, or 2. Use long bamboo poles to shake off fruits from the trees. 3. Don't cut tree or branches to collect fruits
<i>Gultheria fragrantissima</i>	1. Collect leaves by hand picking and twigs by using sharp sickle. 2. From single plant collect only 50% of leaves and twigs. 3. Do not uproot the entire plant.

6. Marketing and sales plan

Table 4. Marketing and sales plan for NWFPs

NWFP	Potential market	Estimated quantity for sale per season (unit)	Expected price/unit	Total (Nu)
<i>Rubia cordifolia</i> (La-nyi-roo)	India	8000 kgs	60	480000
<i>Pouzolzia sanguinea</i> (Yongjiba-Sh)	Incense enterprises	300 kgs	50	15000
<i>Elatosteme lineolatum</i> (Drimom-Sh)	Locality market	400 bundles	10	4000
<i>Plectocomia himalayana</i> (Phashi)	Locality market	300 nos	25	75000
Mushroom (Bamung-Sh)	Locality market	100 kgs	50	5000
<i>Diplazium esculentum</i> (Dhawai-Sh)	Locality market	400 bundles	10	4000

<i>Viscum nepalense</i> (Nya-shing-jorma-Sh)	Locality market	100 kgs	100	10000
<i>Girardinia diversifolia</i> (Zangroo-Sh)	Thimphu	25 kgs (dried)	1700	425000
<i>Swertia chirayita</i> (Khalu-Sh)	India	15 kgs	100	1500
<i>Daphne bolua</i> (Shogushing-Sh)	Paper enterprises	50kg	30	1500
<i>Paris polyphylla</i> (Thoksampa -Sh)	India	5kg	6000	30000
<i>Chimonobambusa callosa</i> (Rasu)	Locality market	2000 culms	2	4000 (Should be collected by buyers)
<i>Borinda grossa</i> (Shi-Sh)	Locality market	1000 culms	30	3000
<i>Illicium griffithii</i> (Khaila chinang -Sh)	India	500 kgs	200	100000
<i>Juglans regia</i> (Kheshing-Sh)	Locality market	300 kgs	60	18000
<i>Gultheria fragrantissima</i> (Sakchongma-Sh)	Not traded so far	400 kgs	NA	NA

7. Marketing arrangements

The harvesting of the NWFPs from the identified/designated sites are collection based on the basic harvesting guidelines and prescriptions. For the harvesting of the NWFPs, one member from each household is permitted and the collected products are gathered at a common place for further marketing through auction. The following procedures are followed for sale/marketing of the collected NWFPs.

7.1 Standard Operating Procedure (SOP) for Collection and Marketing of Non-Wood Forest Products (NWFPs)

Harvesting of NWFPs

- Chairperson of NWFP group shall obtain harvesting/collection permit from Range Office in writing
- After approval of the permit, Chairperson shall inform all members stating collection time
- NWFP members must follow collection/harvesting period timeline mentioned in the plan
- NWFP members must strictly follow the harvesting rules mentioned in the management plan
- After harvesting, members should store NWFPs following recommended post-harvest practice
- Chairperson shall inform Range Office of completion of harvest

Registration Fee

Buyers should pay minimal registration fee of Nu.1000 to NWFP Committee members. The registration fee should be paid before the expiry of registration timeline. If the buyers do not turn up for auction, the money shall be freezed and deposited into the NWFP group account. The registration fee shall be credited back to buyers if participated in the auction.

8. Benefits to the members

The members of the NWFP group will be allowed to participate for annual collection of the NWFPs found available in their locality. One member from each household shall be allowed for collection of the NWFPs and deposit the collected NWFPs in common place. The auction committee members shall then sale the NWFPs through auction and individual collector will be benefitted from the sale. The income generated per member through the sale of NWFPs will support their family's livelihood improvement.

Through the formation of NWFP groups, the members will take ownership for collection of the NWFPs. The entire members of the group will have equal rights over the collection of resources ensuring the sustainability in perpetuity.

9. Benefits to the group

The members of the NWFP group will be allowed to participate for annual collection of the NWFPs found available in their locality. One member from each household shall be allowed for collection of the NWFPs and deposit the collected NWFPs in common place. The auction committee members shall then sale the NWFPs through auction and individual collector will be benefitted from the sale. The income generated per member through the sale of NWFPs, about 5% of the amount shall be deposited in the group saving account which will ultimately benefit the group.
